

# Reflection

**Reflection** is a type of transformation that flips a shape in a mirror line (also called a line of reflection) so that each point is the same distance from the mirror line as its reflected point.

E.g. Triangle P has been reflected in the line  $x = 4$  to give Triangle Q.

**Mathematical Reflections**, 1970 **Mathematical Vistas** Peter Hilton, Derek Holton, Jean Pedersen, 2013-06-29 Focusing Your Attention We have called this book Mathematical Vistas because we have already published a companion book Mathematical Reflections in the same series 1 indeed the two books are dedicated to the same principal purpose to stimulate the interest of bright people in mathematics It is not our intention in writing this book to make the earlier book a prerequisite but it is of course natural that this book should contain several references to its predecessor This is especially but not uniquely true of Chapters 3 4 and 6 which may be regarded as advanced versions of the corresponding chapters in Mathematical Reflections Like its predecessor the present work consists of nine chapters each devoted to a lively mathematical topic and each capable in principle of being read independently of the other chapters Thus this is not a text which as is the intention of most standard treatments of mathematical topics builds systematically on certain common themes as one proceeds 1 Mathematical Reflections In a Room with Many Mirrors Springer Undergraduate Texts in Mathematics 1996 Second Printing 1998 We will refer to this simply as MR 2 There was an exception in MR Chapter 9 was concerned with our thoughts on the doing and teaching of mathematics at the undergraduate level

**Problem-Solving and Selected Topics in Euclidean Geometry** Sotirios E. Louridas, Michael Th. Rassias, 2014-07-08 Problem Solving and Selected Topics in Euclidean Geometry in the Spirit of the Mathematical Olympiads contains theorems which are of particular value for the solution of geometrical problems Emphasis is given in the discussion of a variety of methods which play a significant role for the solution of problems in Euclidean Geometry Before the complete solution of every problem a key idea is presented so that the reader will be able to provide the solution Applications of the basic geometrical methods which include analysis synthesis construction and proof are given Selected problems which have been given in mathematical olympiads or proposed in short lists in IMO's are discussed In addition a number of problems proposed by leading mathematicians in the subject are included here The book also contains new problems with their solutions The scope of the publication of the present book is to teach mathematical thinking through Geometry and to provide inspiration for both
