The Renaissance of Mechanics Walter Roy Laird, 2024-05-31. This book gives an account of the origins of theoretical mechanics in antiquity, its limited reception in the Arabic and Latin Middle Ages and its recovery and subsequent development in Italy to the time of Galileo. From late antiquity to the fifteenth century, the ancient science of mechanics, the theory of machines, was almost completely unknown in the Latin west. Then from the mid-fifteenth century on, Italian humanists began to recover the ancient texts and from them, through the sixteenth century, Italian mathematicians restored the ancient science of mechanics. The Renaissance of Mechanics first examines the principal ancient works on mechanics: the Aristotelian Mechanical Problems, the mechanical geometry of Archimedes and Hero's Mechanics, and then describes their limited reception in the Arabic world and their even more limited transmission to the medieval Latin west. It then traces their recovery in the fifteenth century and their assimilation in the sixteenth by Niccolò Tartaglia, Francesco Maurolico, and Guidobaldo dal Monte, culminating in Galileo's rediscovery of Hero's lost mechanical principles. The book ends with an examination of Galileo's mechanics and its relation to his new science of motion and suggests how modern mechanics would emerge from these ancient roots. Detailed analyses of these works offer new insights and interpretations while remaining accessible to general historians. The Renaissance of Mechanics will be of especial interest to those working in the fields of renaissance humanism and the history of ancient, medieval, and renaissance science and mathematics.

Who's who in American Jewry, 1926-, 1927 History of Mathematics in Africa: 1986-1999 Paulus Gerdes, Ahmed Djebbar, 2011 *The Division and Methods of the Sciences* Saint Thomas (Aquinas), 1986 Who's who in America, 1924 **Vilfredo Pareto** Alfonso de Pietri-Tonelli, Georges H. Bousquet, Julia Bamford, 1994-03-01. From the viewpoint of carrying out multi-disciplinary studies between economics and other social sciences, Pareto's theories are especially important as they are the core of contemporary orthodox economics. His sociology is constructed very differently from his economics. First, the former deals with non-rational social behaviour of human beings, whilst the latter with rational behaviour. Secondly, in the methodology, the former is empirical and inductive, while the latter is logical and deductive. The present volume is a revamping of works by two authorities on Pareto. It combines Alfonso de Pietri-Tonelli's address to the Italian Association for Advancement of Science on the occasion of the tenth anniversary of Pareto's death with selected chapters of Vilfredo Pareto's *La vie et son oeuvre*. Payot, Paris, 1928, by G. H. Bousquet.
