

How to organise Mathematical Team Games

Photocopy a page of the chosen game for each team. Cut them out and then shuffle them a little. Teams can then deal them out in the normal way. Some teachers might prefer to photocopy them on to coloured paper and perhaps to laminate the sheets to give a more permanent and significant feel to the cards. I usually make seven or eight copies, each on a card of a different colour.

Such a method would mean that a collection of team games could be ready to use at very short notice indeed. It also means that you have a second game in reserve if the first one ends too soon. These games have been tried on secondary school pupils from 11 to 16 with very positive feedback. In fact it was pupil enthusiasm which inspired me to put this collection together. I hope that you too will find them useful and stimulating.

Why are the Star cards numbered?

The numbers have no significance within the context of the team-game itself but are there simply to check that none of the cards are missing. In these games the final question will be found on one and possibly on two of the cards. As a positive decision in this collection, the question will never be found on card 1.

Since each card does contain some unique piece of information, a single missing card would mean that the problem cannot be solved. None of them are duds or dummies.

What is the best size for the teams?

Although in theory it does not matter if the number of cards dealt to each player is different, since the information is to be shared anyway, in practice it is better that each team member makes the same contribution. Luckily the division properties of the duodecimal system are a great help here.

Teams of three or four are probably the most satisfactory in any case and these sizes should be your first choice. If you do have to have a team of five, then it is best to insist that the two spare cards be placed in the centre of the table.

It is of course possible to divide the class into teams of two as they would get six cards each. However, a team of two does not really encourage the social interaction that this approach to mathematical teaching is intended to produce.

Ownership of the cards

Try to encourage everyone to retain ownership of their cards and the information that they contain. The aim is to encourage cooperation and the ownership of certain pieces of information gives a status to everyone present and helps to ensure that nothing is forgotten or missed. Everyone holds some part of the jigsaw and contributes to the success of the project. In fact the process is very like tackling an ordinary jigsaw puzzle without having the picture on the box. Initially it is not immediately clear even what the problem is or how to start to work towards what the answer might be.

Sorting out the muddle and bringing order out of chaos is an important part of the satisfaction that these team-games offer.
