Lesh, Susan J. Lamon, 2013-04-03 This book is the result of a conference sponsored by the Educational Testing Service and the University of Wisconsin's National Center for Research in Mathematical Sciences Education The purpose of the conference was to facilitate the work of a group of scholars whose

interests included the assessment of higher order understandings and processes in foundation level pre high school mathematics Discussions focused on such issues as the purposes of assessment guidelines for producing and scoring real life assessment activities and the meanings of such terms as deeper and higher order understanding cognitive objectives and authentic mathematical activities Assessment was viewed as a critical component of complex dynamic and continually adapting educational systems During the time that the chapters in this book were being written sweeping changes in mathematics education were being initiated in response to powerful recent advances in technology cognitive psychology and mathematics as well as to numerous public demands for educational reform These changes have already resulted in significant reappraisals of what it means to understand mathematics of the nature of mathematics teaching and learning and of the real life situations in which mathematics is useful The challenge was to pursue assessment related initiatives that are systematically valid in the sense that they work to complement and enhance other improvements in the educational system rather than act as an impediment to badly needed curriculum reforms To address these issues most chapters in this book focus on clarifying and articulating the goals of assessment and instruction and they stress the content of assessment above its mode of delivery Computer or portfolio based assessments are interpreted as means to ends not as ends in themselves Assessment is conceived as an ongoing documentation process seamless with instruction whose quality hinges upon its ability to provide complete and appropriate information as needed to inform priorities in instructional decision making This book tackles some of the most complicated issues related to assessment and it offers fresh perspectives from leaders in the field with the hope that the ultimate consumer in the instruction assessment enterprise the individual student will reclaim his or her potential for self directed mathematics learning

Visible Thinking in the K-8 Mathematics Classroom Ted H. Hull, Don S. Balka, Ruth Harbin Miles, 2011-01-21 The key to students success in math lies in a way of teaching that provides clear evidence of how students are thinking about problems and builds on that thinking to take them to a deeper level of understanding Seasoned math educators Ted Hull Don Balka and Ruth Harbin Miles offer teachers a sequential and developmental plan for integrating visual thinking into current classroom practices and gradually but steadily initiating successful instructional changes in mathematics Their new book provides teachers with numerous sample problems and classroom scenarios showing successful teacher interventions at work and offers guidance on how teachers can adapt traditional problems to promote visible thinking in their own classrooms

Mindset Mathematics: Visualizing and Investigating Big Ideas, Grade 2 Jo Boaler, Jen Munson, Cathy Williams, 2021-12-10 Engage students in mathematics using growth mindset techniques The most challenging parts of teaching mathematics are engaging students and helping them understand the connections between mathematics concepts In this volume you will find a collection of low floor high ceiling tasks that will help you do just that by looking at the big ideas in second grade through visualization play and investigation During their work with tens of thousands of teachers authors Jo Boaler Jen Munson and Cathy Williams heard the same

message that they want to incorporate more brain science into their math instruction but they need guidance in the techniques that work best to get across the concepts they needed to teach So the authors designed Mindset Mathematics around the principle of active student inquiry with tasks that reflect the latest brain science on learning Open creative and visual math tasks have been shown to support student learning and more importantly change their relationship with mathematics and start believing in their own potential The tasks in Mindset Mathematics reflect the lessons from brain science that There is no such thing as a math person and anyone can learn mathematics to high levels Mistakes struggle and challenge are opportunities for brain growth Speed is unimportant and even counterproductive in mathematics Mathematics is a visual and beautiful subject and our brains want to think visually about mathematics With engaging questions open ended tasks and four color visuals that will help kids get excited about mathematics Mindset Mathematics is organized around nine big ideas which emphasize the connections within the Common Core State Standards CCSS and can be used with any current curriculum
