Baroody, Ann Dowker, 2013-06-17 This volume focuses on two related questions that are central to both the psychology of mathematical thinking and learning and to the improvement of mathematics education What is the nature of arithmetic expertise How can instruction best promote it Contributors from a variety of specialties including cognitive developmental educational and neurological psychology mathematics education and special education offer theoretical perspectives and much needed empirical evidence about these issues As reported in this volume both theory and research indicate that the nature of
