Mathematical Methods for Engineering Applications Deolinda M. L. D. Rasteiro, Fatih Yilmaz, Araceli Queiruga-Dios, Jesús Martín Vaquero, Ion Mierlus Mazilu, 2025-08-02 This proceedings volume compiles papers presented at the 5th International Conference on Mathematics and its Applications in Science and Engineering ICMASE 2024 held on September 16 18 2024 by the Polytechnic Institute of Coimbra Portugal The ICMASE 2024 was a hybrid conference featuring both in person and virtual attendance The works in this volume explore recent developments in the application of mathematics to science and engineering focusing on mathematical and computational modeling of real world problems Topics include algebra and number theory analysis geometry statistics computational and discrete mathematics as well as their intersections with engineering applications Additionally educational aspects of mathematics in engineering fields are addressed This volume is intended for researchers practitioners and graduate students particularly those interested in advanced methods for applying mathematics across various contexts and fields

New Digital Signal Processing Methods Raoul R. Nigmatullin, Paolo Lino, Guido Maione, 2020-05-23 This book is intended as a manual on modern advanced statistical methods for signal processing The objectives of signal processing are the analysis synthesis and modification of signals measured from different

natural phenomena including engineering applications as well. Often the measured signals are affected by noise distortion and incompleteness and this makes it difficult to extract significant signal information. The main topic of the book is the extraction of significant information from measured data with the aim of reducing the data size while keeping the basic information. Knowledge about the peculiarities and properties of the analyzed system to this aim advanced and recently developed methods in signal analysis and treatment are introduced and described in depth. More in details the book covers the following new advanced topics and the corresponding algorithms including detailed descriptions and discussions: the Eigen Coordinates ECs method, The statistics of the fractional moments, The quantitative universal label QUL and the universal distribution function for the relative fluctuations UDFRF, the generalized Prony spectrum, the Non orthogonal Amplitude Frequency Analysis of the Smoothed Signals NAFASS, the discrete geometrical invariants DGI serving as the common platform for quantitative comparison of different random functions. Although advanced topics are discussed in signal analysis each subject is introduced gradually with the use of only the necessary mathematics and avoiding unnecessary abstractions. Each chapter presents testing and verification examples on real data for each proposed method. In comparison with other books here it is adopted a more practical approach with numerous real case studies.

Predictive and Simulation Analytics Walter R. Paczkowski, 2023-07-18 This book connects predictive analytics and simulation analytics with the end goal of providing Rich Information to stakeholders in complex systems to direct data driven decisions. Readers will explore methods for extracting information from data work with simple and complex systems and meld multiple forms of analytics for a more nuanced understanding of data science. The methods can be readily applied to business problems such as demand measurement and forecasting, predictive modeling, pricing analytics including elasticity estimation, customer satisfaction assessment, market research, new product development and more. The book includes Python examples in Jupyter notebooks available at the book's affiliated Github. This volume is intended for current and aspiring business data analysts, data scientists and market research professionals in both the private and public sectors.

Mathematical Techniques in Multisensor Data Fusion David Lee Hall, Sonya A. H. McMullen, 2004 Since the publication of the first edition of this book advances in algorithms, logic and software tools have transformed the field of data fusion. The latest edition covers these areas as well as smart agents, human computer interaction, cognitive aides to analysis and data system fusion control. Data fusion system this book guides you through the process of determining the trade offs among competing data fusion algorithms, selecting commercial off the shelf COTS tools and understanding when data fusion improves systems processing. Completely new chapters in this second edition explain data fusion system control, DARPA's recently developed TRIP model and the latest applications of data fusion in data warehousing and medical equipment as well as defence systems.
