Kemeny, James Laurie Snell, 1972 Qualitative Mathematics for the Social Sciences Lee Rudolph, 2013 This book combines psychological and mathematical perspectives to analyse how qualitative mathematics can be used to create models of social and psychological processes *Mathematical Models for Society and Biology* Edward Beltrami, 2002 Mathematical Modeling for Society and Biology engagingly relates mathematics to compelling real life problems in biology and contemporary society It shows how mathematical tools can be used to gain insight into these modern common problems to provide effective real solutions Beltrami's creative non threatening approach draws on a wealth of interesting examples pertaining to current social and biological issues Central ideas appear again in different contexts throughout the book showing the general unity of the modeling process The models are strikingly novel and based on issues of real concern Most have never appeared in book form Through the relevance of these models mathematics becomes not just figures and numbers but a means to a more refined understanding of the world Mathematical Models in the Social Sciences, 1963 Theoretical analysis of mathematical model methodology in social sciences Computational and Mathematical Modeling in the Social Sciences Scott de Marchi, 2005-08-15 Offers an overview of mathematical modeling concentrating on game theory statistics and computational modeling **Causal Models in the Social Sciences** H. M. Blalock, Jr., 2011-12-31 Causal models are formal theories stating the relationships between precisely defined variables and have become an indispensable tool of the social scientist This collection of articles is a course book on the causal modeling approach to theory construction and data analysis H M Blalock Jr summarizes the then current developments in causal model utilization in sociology political science economics and other disciplines This book provides a comprehensive multidisciplinary picture of the work on causal models It seeks to address the problem of measurement in the social sciences and to link theory and research through the development of causal models Organized into five sections Simple Recursive Models Path Analysis Simultaneous Equations Techniques The Causal Approach to Measurement Error and Other Complications this volume contains twenty seven articles eight of which were specially commissioned Each section begins

with an introduction explaining the concepts to be covered in the section and links them to the larger subject. It provides a general overview of the theory and application of causal modeling. Blalock argues for the development of theoretical models that can be operationalized and provide verifiable predictions. Many of the discussions of this subject that occur in other literature are too technical for most social scientists and other scholars who lack a strong background in mathematics. This book attempts to integrate a few of the less technical papers written by econometricians such as Koopmans, Wold, Strotz, and Fisher with discussions of causal approaches in the social and biological sciences. This classic text by Blalock is a valuable source of material for those interested in the issue of measurement in the social sciences and the construction of mathematical models. The Effective Content of Mathematical Models in the Social Sciences A.A. Lewis, 1992

Mathematical Models in the Social Sciences James G. Anderson, 1977* Thinking with Models Thomas L. Saaty, Joyce M. Alexander, 1977? **Sociodynamics** Wolfgang Weidlich, 2006-07-07 Highly recommended. This is an important book in putting the burgeoning field of sociodynamics on a solid footing. *Journal of Artificial Societies and Social Simulation*. This text deals with general modelling concepts in the social sciences, their applications, and their mathematical methods. The author's well-organized approach offers a clear, coherent introduction to terminology, approaches, and goals in modelling. Appropriate for advanced undergraduates and graduate students, it requires a solid background in algebra and calculus. The three-part treatment begins by addressing general modelling concepts; the second part provides applications; and the third discusses mathematical methods. Topics include population dynamics, group interaction, political transitions, evolutionary economics, and urbanization. Guiding students through a series of practical applications that illustrate the methods, the text concludes with a detailed look at mathematical methods. **Thinking with models** Thomas L. Saaty and Joyce M. Alexander, This is a rich and exciting collection of examples and applications in mathematical modelling. There is broad variety, balance, and highly motivating material, and most of this assumes minimal mathematical training. *Mathematical Models as a Tool for Social Sciences* Bruce J. West, 1980 **Mathematical Modeling in the Social and Life Sciences** Michael Olinick, 2014-05-05 The goal of this book is to encourage the teaching and learning of mathematical model building relatively early in the undergraduate program. The text introduces the student to a number of important mathematical topics and to a variety of models in the social sciences, life sciences, and humanities. *Limits Of Mathematical Modeling In The Social Sciences, The: The Significance Of Godel's Incompleteness Phenomenon* Francisco Antonio Doria, 2017-05-30 Current mathematical models are notoriously unreliable in describing the time evolution of unexpected social phenomena, from financial crashes to revolution. Can such events be forecast? Can we compute probabilities about them? Can we model them? This book investigates and attempts to answer these questions through Gödel's two incompleteness theorems, and in doing so demonstrates how influential Gödel is in modern logical and mathematical thinking. Many mathematical models are applied to economics and social theory, while Gödel's theorems are able to predict their limitations for more accurate analysis and

understanding of national and international events This unique discussion is written for graduate level mathematicians applying their research to the social sciences including economics social studies and philosophy and also for formal logicians and philosophers of science

Mathematical Modeling in Social Sciences and Engineering Juan Carlos Cortés López, Lucas Antonio Jodar Sanchez, 2014 This book is devoted to the power of mathematical modelling to give an answer to a broad diversity of real problems including medicine finance social behavioural problems and many engineering problems Mathematical modelling in social sciences is very recent and comes with special challenges such as the difficulty to manage human behaviour the role of the model hypothesis with the objectivity subjectivity and the proper understanding of the conclusions In this book the reader will find several behavioural mathematical models that in fact may be understood as the so called epidemiological models in the sense that they deal with populations instead of individuals
