Advanced Mathematical Methods in Biosciences and Applications Faina Berezovskaya, Bourama Toni, 2019-09-19
Featuring contributions from experts in mathematical biology and biomedical research this edited volume covers a diverse set of topics on mathematical methods and applications in the biosciences Topics focus on advanced mathematical methods with chapters on the mathematical analysis of the quasispecies model Arnold's weak resonance equation bifurcation analysis and the Tonnelier Gerstner model Special emphasis is placed on applications such as natural selection population heterogeneity polyvariant ontogeny in plants cancer dynamics and analytical solutions for traveling pulses and wave trains in neural models A survey on quasiperiodic topology is also presented in this book Carefully peer reviewed this volume is suitable for students interested in interdisciplinary research Researchers in applied mathematics and the biosciences will find this book an important resource on the latest developments in the field In keeping with the STEAM H series the editors hope to inspire interdisciplinary understanding and collaboration *Maths Express Year 6: Teachers' Resource Book*, 2000-01-26 The Numeracy Extras series provides a range of materials developed to be used alongside existing resources as extras to support maths teaching The books in the Maths Express range are designed to stretch the more able pupil in a whole class context and feature challenging exercises *Maths Express Year 4: Teachers' Resource Book*, 2000-01-25 The Numeracy Extras series provides a range of materials developed to be used alongside existing resources as extras to support maths teaching The books in the Maths Express range are designed to stretch the more able pupil in a whole class context and feature challenging exercises **Maths Express Year 5: Teachers' Resource Book**, 2000-01-26 The Numeracy Extras series provides a range of materials developed to be used alongside existing resources as extras to support maths teaching The books in the Maths Express range are designed to stretch the more able pupil in a whole class context and feature challenging exercises **Fast Matrix Multiplication with Applications** Jerzy S. Respondek, 2025-02-26 The ambition of this monograph is to show the methods of constructing fast matrix multiplication algorithms and their applications in an intelligible way accessible not only to mathematicians The scope and coverage of the book are comprehensive and constructive and the analyses and algorithms can be readily applied by readers from various disciplines of science and technology who need modern tools and techniques related to fast matrix multiplication and related problems and techniques Authors start from commutative algorithms through exact non commutative algorithms partial algorithms to disjoint and arbitrary precision algorithms Authors explain how to adapt disjoint algorithms to a single matrix multiplication and prove the famous tau theorem in the not so special case In an appendix authors show how to work with confluent Vandermonde matrices since they are used as an auxiliary tool in problems arising in fast matrix multiplication Importantly each algorithm is demonstrated by a concrete example of a decent dimensionality to ensure that all the mechanisms of the algorithms are illustrated Finally authors give a series of applications of fast matrix multiplication algorithms in linear

algebra and other types of problems including artificial intelligence *Mathematical and Statistical Applications in Life Sciences and Engineering* Avishek Adhikari, Mahima Ranjan Adhikari, Yogendra Prasad Chaubey, 2017-12-06 The book includes articles from eminent international scientists discussing a wide spectrum of topics of current importance in mathematics and statistics and their applications It presents state of the art material along with a clear and detailed review of the relevant topics and issues concerned The topics discussed include message transmission colouring problem control of stochastic structures and information dynamics image denoising life testing and reliability survival and frailty models analysis of drought periods prediction of genomic profiles competing risks environmental applications and chronic disease control It is a valuable resource for researchers and practitioners in the relevant areas of mathematics and statistics

Mathematical Modelling for Teachers Keng Cheng Ang, 2018-09-03 Mathematical Modelling for Teachers Resources Pedagogy and Practice provides everything that teachers and mathematics educators need to design and implement mathematical modelling activities in their classroom Authored by an expert in Singapore the global leader in mathematics education it is written with an international readership in mind This book focuses on practical classroom ideas in mathematical modelling suitable to be used by mathematics teachers at the secondary level As they are interacting with students all the time teachers generally have good ideas for possible mathematical modelling tasks However many have difficulty translating those ideas into concrete modelling activities suitable for a mathematics classroom In this book a framework is introduced to assist teachers in designing planning and implementing mathematical modelling activities and its use is illustrated through the many examples included Readers will have access to modelling activities suitable for students from lower secondary levels Years 7 and 8 onwards along with the underlying framework guiding notes for teachers and suggested approaches to solve the problems The activities are grouped according to the types of models constructed empirical deterministic and simulation models Finally the book gives the reader suggestions of different ways to assess mathematical modelling competencies in students **InfoWorld** ,2000-09-11 InfoWorld is targeted to Senior IT
