Howe,W. James Lewis,James J. Madden,2021-04-23 The need to improve the mathematical proficiency of elementary teachers is well recognized and it has long been of interest to educators and researchers in the U S and many other countries But the specific proficiencies that elementary teachers need and the process of developing and improving them remain only partially conceptualized and not well validated empirically To improve this situation national workshops were organized at Texas A M University to generate focused discussions about this important topic with participation of mathematicians mathematics educators and teachers Developing Mathematical Proficiency for Elementary Instruction is a collection of articles that grew out of those exciting cross disciplinary exchanges Developing Mathematical Proficiency for Elementary Instruction is organized to probe the specifics of mathematical proficiency that are important to elementary teachers during two separate but inter connected professional stages as pre service teachers in a preparation program and as in service teachers teaching

Research in Education ,1970 **The Science Teaching Efficacy Belief Instruments (STEBI A and B)** James Deehan,2016-07-28 The purpose of this Springer Brief is to provide a comprehensive review of both the STEBI methods and findings through the use of a clearly defined analytic framework A systematic review of literature yielded 107 STEBI A research items and 140 STEBI B research items The STEBI instruments have been used in a wide range of qualitative cross sectional longitudinal and experimental designs Analysis of the findings of the papers reveals that in service and pre service programs that use innovative practices such as cooperative learning inquiry based investigation and nature of science instruction can produce positive growth in participants science teaching efficacy beliefs The personal science teaching efficacy beliefs of pre service and in service teachers showed greater mean scores and higher growth than their outcome expectancies Implications are discussed Reconstructing the Work of Teacher Educators Theresa Bourke,Deborah Henderson,Rebecca Spooner-Lane,Simone White,2022-08-30 This book examines agentic approaches by which teacher educators navigate a highly regulated environment It investigates how teacher educators are responding to such regulation by employing approaches such as exploratory and case study research designs This book analyzes qualitative and quantitative data to understand the diverse innovative and critical perspectives of teacher educators who are guided by state and federal level initiatives to enhance the quality Initial Teacher Education ITE programs Prominent educational theoretical perspectives are also used in this book to inform data analysis and to illuminate the empirically based findings This book showcases research informed insights for the global education community from leading researchers from across a number of

teacher education institutions locally and otherwise By adopting an activist approach this book positions teacher educators research and contribution to the field as agentive and pro active *Rational Numbers* Thomas P. Carpenter, Elizabeth Fennema, Thomas A. Romberg, 2012-10-12 Until recently there had been relatively little integration of programs of research on teaching learning curriculum and assessment However in the last few years it has become increasingly apparent that a more unified program of research is needed to acquire an understanding of teaching and learning in schools that will inform curriculum development and assessment The chapters in this volume represent a first step toward an integration of research paradigms in one clearly specified mathematical domain Integrating a number of different research perspectives is a complex task and ways must be found to reduce the complexity without sacrificing the integration The research discussed in this volume is tied together because it deals with a common content strand During the last ten years specific content domains have served as focal points for research on the development of mathematical concepts in children The areas of addition and subtraction algebra rational numbers and geometry are notable examples Whether a similar organizational structure will prevail for programs of research that integrate the study of teaching learning curriculum and assessment is an open question The perspectives presented in this volume illustrate the potential for adopting this perspective Soviet Education Programs, Foundations, Curriculms, Teacher Preparation United States. Office of Education, 1960 Proceedings of the Fourth International Congress on Mathematical Education M. instruction Expertise in Mathematics Instruction addresses this need clearly and concisely In particular it examines all aspects of emphases employed to characterize the nature of expertise in mathematics instruction from both researchers and practitioners perspectives Moreover with research contributions from both the East and the West this book also examines ideas pertinent to fostering and demonstrating expertise in mathematics instruction within different system contexts This book will raise questions and issues for mathematics education researchers to guide a critical examination of what can be learned from other education systems Expertise in Mathematics Instruction builds on its theoretical and methodological approach with contributions from international experts in the field Additionally a review of related research from mathematics education serves as an introduction to the new research in both Eastern and Western settings Concluding this resource is a reflection on the benefits of this international collaboration and possible research directions for the future The final chapter cohesively joins traditional and current research for action Expertise in Mathematics Instruction is of interest to researchers in mathematics education mathematics teacher educators and mathematics educators
