Mathematics for Operations Research W. H. Marlow, 1978 Effective procedures for mathematical tasks in many fields resolving linear independence finding null spaces many more 1300 problems 1978 edition *Operations Research Models and Methods* Paul A. Jensen, Jonathan F. Bard, 2002-10-08 In a rapidly developing field like Operations Research its easy to get overwhelmed by the variety of topics and analytic techniques Paul Jensen and Jonathan Bard help you master the expensive field by focusing on the fundamental models and methodologies underlying the practice of Operations Research Bridging the gap between theory and practice the author presents the quantitative tools and models most important to understanding modern operations research You ll come to appreciate the power of OR techniques in solving real world problems and applications in your own field You ll learn how to translate complex situations into mathematical models solve models and turn models into solutions This text is designed to bridge the gap between theory and practice by presenting the quantitative tools and models most suited for modern operations research The principal goal is to give analysts engineers and decision makers a larger appreciation of their roles by defining a common terminology and by explaining the interfaces between the underlying methodologies Features Divides each subject into methods and models giving you greater flexibility in how you approach the material Concise and focused presentation highlights central ideas Many examples throughout the text will help you better understand mathematical material *Introduction to the Mathematics of Operations Research with Mathematica* Kevin J. applications ***OPERATIONS RESEARCH*** NITA H. SHAH, RAVI M. GOR, HARDIK SONI, 2007-01-21 This comprehensive book deals with the theoretical aspects of operations research and explains the concepts with practical examples. It begins by focusing on the need and prerequisites of operations research and moves on to discuss topics such as linear programming, integer programming, nonlinear programming, assignment problems, and inventory models in sufficient detail. Besides this, the text also explains how to achieve different goals in the order of priority to optimize the objective function, various criteria of decision making under certainty, uncertainty, and risk, and different techniques of analyzing the time involved in completing the project and the related cost.

KEY FEATURES

- Gives well defined algorithms to illustrate the different techniques of operations research.
- Inventory problems are discussed with calculus.
- Provides worked out examples in each chapter to illustrate the concepts discussed.

This text is intended for the undergraduate and postgraduate students of Mathematics, Statistics Engineering, and postgraduate students of Computer Applications and Business Administration. In addition, practising executives, consultants, and managers will also find the book very useful.

Extremal Methods of Operations Research Paul R. Gribik, K. O. Kortanek, 1985

Operations Research Problems Raúl Poler, Josefa Mula, Manuel

Díaz-Madroñero, 2013-11-08 The objective of this book is to provide a valuable compendium of problems as a reference for undergraduate and graduate students, faculty researchers, and practitioners of operations research and management science. These problems can serve as a basis for the development or study of assignments and exams. Also, they can be useful as a guide for the first stage of the model formulation i.e., the definition of a problem. The book is divided into 11 chapters that address the following topics: Linear programming, integer programming, non-linear programming, network modeling, inventory theory, queue theory, tree decision game theory, dynamic programming, and markov processes. Readers are going to find a considerable number of statements of operations research applications for management decision making. The solutions of these problems are provided in a concise way although all topics start with a more developed resolution. The proposed problems are based on the research experience of the authors in real world companies so much as on the teaching experience of the authors in order to develop exam problems for industrial engineering and business administration studies.
