papers accepted for presentation at the bien nial IMA Conference on the Mathematics of Surfaces held in the University of Cambridge 4 7 September 2000 While there are many international conferences in this fruitful borderland of mathematics computer graphics and engineering this is the oldest the most frequent and the only one to concentrate on surfaces Contributors to this volume come from twelve different countries in Europe North America and Asia Their contributions reflect the wide diversity of present day applications which include modelling parts of the human body for medical purposes as well as the production of cars aircraft and engineering components Some applications involve design or construction of surfaces by interpolating or approximating data given at points or on curves Others consider the problem of reverse engineering giving a mathematical description of an already constructed object We are particularly grateful to Pamela Bye at the Institute of Mathematics and its Applications for help in making arrangements Stephanie Harding and Karen Barker at Springer Verlag London for publishing this volume and to Kwan Yee Kenneth Wong Cambridge for his heroic help with compiling the proceedings and for dealing with numerous technicalities arising from large and numerous computer files Following this Preface is a listing of the programme committee who with the help of their colleagues did much work in refereeing the papers for these proceedings Geometric Complex Analysis - Proceedings Of The Third International

proceedings is a collection of articles in several complex variables with emphasis on geometric methods and results which includes several survey papers reviewing the development of the topics in these decades Through this volume one can see an active field providing insight into other fields like algebraic geometry dynamical systems and partial differential equations

Peters, A. van de Ven, 2012-12-06 Contents Introduction Standard Notations Preliminaries Curves on Surfaces Mappings of Surfaces Some General Properties of Surfaces Examples The Enriques Kodaira Classification Surfaces of General Type K3 Surfaces and Enriques Surfaces Bibliography Subject Index **Handbook of Splines** Gheorghe Micula, Sanda Micula, 2012-12-06 The purpose of this book is to give a comprehensive introduction to the theory of spline functions together with some applications to various fields emphasizing the significance of the relationship between the general theory and its applications At the same time the goal of the book is also to provide new material on spline function theory as well as a fresh look at old results being written for people interested in research as well as for those who are interested in applications The theory of spline functions and their applications is a relatively recent field of applied mathematics In the last 50 years spline function theory has undergone a wonderful development with many new directions appearing during this time This book has its origins in the wish to adequately describe this development from the notion of spline introduced by I. J. Schoenberg 1901 1990 in 1946 to the newest recent theories of spline wavelets or spline fractals Isolated facts about the functions now called splines can be found in the papers of L. Euler A. Lebesgue G. Birkhoff J.

Algebraic Geometry III A. N. Parshin, I. R. Shafarevich, 1997-12-08 This two part EMS volume provides a succinct summary of complex algebraic geometry coupled with a lucid introduction to the recent work on the interactions between the classical area of the geometry of complex algebraic curves and their Jacobian varieties An excellent companion to the older classics on the subject *Graduate Courses*, 1893 **Flips for 3-folds and 4-folds** Alessio Corti, 2007-06-28 Aimed at graduates and researchers in algebraic geometry this collection of edited chapters provides a complete and essentially self contained account of the construction of 3 fold and 4 fold klt flips **Complex Non-Kähler Geometry** Sławomir Dinew, Sébastien Picard, Andrei Teleman, Alberto Verjovsky, 2019-11-05 Collecting together the lecture notes of the CIME Summer School held in Cetraro in July 2018 the aim of the book is to introduce a vast range of techniques which are useful in the investigation of complex manifolds The school consisted of four courses focusing on both the construction of non Kähler manifolds and the understanding of a possible classification of complex non Kähler manifolds In particular the courses by Alberto Verjovsky and Andrei Teleman introduced tools in the theory of foliations and analytic techniques for the classification of compact complex surfaces and compact Kähler manifolds respectively The courses by Sébastien Picard and Sławomir Dinew focused on analytic

techniques in Hermitian geometry more precisely on special Hermitian metrics and geometric flows and on pluripotential theory in complex non Kähler geometry

Automorphic Forms and the Picard Number of an Elliptic Surface Peter F. Stiller, 2013-04-17 In studying an algebraic surface E which we assume is non singular and projective over the field of complex numbers it is natural to study the curves on this surface In order to do this one introduces various equivalence relations on the group of divisors cycles of codimension one One such relation is algebraic equivalence and we denote by $NS(E)$ the group of divisors modulo algebraic equivalence which is called the Néron Severi group of the surface E This is known to be a finitely generated abelian group which can be regarded naturally as a subgroup of $H^2(E, \mathbb{Z})$ The rank of $NS(E)$ will be denoted p and is known as the Picard number of E Every divisor determines a cohomology class in $H^2(E, \mathbb{Z})$ which is of type $(1,1)$ that is to say a class in $H^{1,1}(E)$ which can be viewed as a subspace of $H^2(E, \mathbb{Z})$ via the Hodge decomposition The Hodge Conjecture asserts in general that every rational cohomology class of type (p,p) is algebraic In our case this is the Lefschetz Theorem on $(1,1)$ classes Every cohomology class in $H^2(E, \mathbb{Z})$ is the class associated to some divisor Here we are writing $H^2(E, \mathbb{Z})$ for its image under the natural mapping into $H^2(E, \mathbb{C})$ Thus $NS(E)$ modulo 2-torsion is $H^{1,1}(E) \cap H^2(E, \mathbb{Z})$ and the bilinear form measures the general part of the cohomology

Cohomological Aspects in Complex Non-Kähler Geometry Daniele Angella, 2013-11-22 In these notes we provide a summary of recent results on the cohomological properties of compact complex manifolds not endowed with a Kähler structure On the one hand the large number of developed analytic techniques makes it possible to prove strong cohomological properties for compact Kähler manifolds On the other in order to further investigate any of these properties it is natural to look for manifolds that do not have any Kähler structure We focus in particular on studying Bott Chern and Aeppli cohomologies of compact complex manifolds Several results concerning the computations of Dolbeault and Bott Chern cohomologies on nilmanifolds are summarized allowing readers to study explicit examples Manifolds endowed with almost complex structures or with other special structures such as for example symplectic generalized complex etc are also considered

In the Tradition of Thurston Ken'ichi Ohshika, Athanase Papadopoulos, 2020-12-07 This book consists of 16 surveys on Thurston's work and its later development The authors are mathematicians who were strongly influenced by Thurston's publications and ideas The subjects discussed include among others knot theory the topology of 3-manifolds circle packings complex projective structures hyperbolic geometry Kleinian groups foliations mapping class groups Teichmüller theory anti de Sitter geometry and co-Minkowski geometry The book is addressed to researchers and students who want to learn about Thurston's wide ranging mathematical ideas and their impact At the same time it is a tribute to Thurston one of the greatest geometers of all time whose work extended over many fields in mathematics and who had a unique way of perceiving forms and patterns and of communicating and writing mathematics

Geometry III Yu.D. Burago, V.A. Zalgaller, 2013-03-14 The original version of this article was written more than five years ago with S.Z. Shefel a profound and original mathematician who died in 1984 Since then the geometry of surfaces has continued to be enriched with ideas and

results This has required changes and additions but has not influenced the character of the article the design of which originated with Shefel Without knowing to what extent Shefel would have approved the changes I should nevertheless like to dedicate this article to his memory Yu D Burago We are trying to state the qualitative questions of the theory of surfaces in Euclidean spaces in the form in which they appear to the authors at present This description does not entirely correspond to the historical development of the subject The theory of surfaces was developed in the first place mainly as the 3 theory of surfaces in three dimensional Euclidean space E^3 however it makes sense to begin by considering surfaces F in Euclidean spaces of any dimension $n \geq 3$ This approach enables us in particular to put in a new light some 3 unsolved problems of this developed and in the case of surfaces in E^3 fairly complete theory and in many cases to refer to the connections with the present stage of development of the theory of multidimensional submanifolds The leading question of the article is the problem of the connection between classes of metrics and classes of surfaces in E^n

Recent Progress of Algebraic Geometry in Japan M. Nagata, 1983-01-01 Recent Progress of Algebraic Geometry in Japan **Mordell-Weil Lattices**

Matthias Schütt, Tetsuji Shioda, 2019-10-17 This book lays out the theory of Mordell Weil lattices a very powerful and influential tool at the crossroads of algebraic geometry and number theory which offers many fruitful connections to other areas of mathematics The book presents all the ingredients entering into the theory of Mordell Weil lattices in detail notably relevant portions of lattice theory elliptic curves and algebraic surfaces After defining Mordell Weil lattices the authors provide several applications in depth They start with the classification of rational elliptic surfaces Then a useful connection with Galois representations is discussed By developing the notion of excellent families the authors are able to design many Galois representations with given Galois groups such as the Weyl groups of E_6 E_7 and E_8 They also explain a connection to the classical topic of the 27 lines on a cubic surface Two chapters deal with elliptic K3 surfaces a pulsating area of recent research activity which highlights many central properties of Mordell Weil lattices Finally the book turns to the rank problem one of the key motivations for the introduction of Mordell Weil lattices The authors present the state of the art of the rank problem for elliptic curves both over \mathbb{Q} and over $\mathbb{C}(t)$ and work out applications to the sphere packing problem Throughout the book includes many instructive examples illustrating the theory Complete Minimal Surfaces of Finite Total Curvature

Kichoon Yang, 2013-03-09 This monograph contains an exposition of the theory of minimal surfaces in Euclidean space with an emphasis on complete minimal surfaces of finite total curvature Our exposition is based upon the philosophy that the study of finite total curvature complete minimal surfaces in \mathbb{R}^3 in large measure coincides with the study of meromorphic functions and linear series on compact Riemann surfaces This philosophy is first indicated in the fundamental theorem of Chern and Osserman A complete minimal surface M immersed in \mathbb{R}^3 is of finite total curvature if and only if M with its induced conformal structure is conformally equivalent to a compact Riemann surface M_0 punctured at a finite set E of points and the tangential Gauss map extends to a holomorphic map $M_0 \rightarrow \mathbb{P}^2$ Thus a finite total curvature complete minimal surface

in \mathbb{R}^3 gives rise to a plane algebraic curve Let M_g denote a fixed but otherwise arbitrary compact Riemann surface of genus g A positive integer r is called a puncture number for M_g if M_g can be conformally immersed into \mathbb{R}^3 as a complete finite total curvature minimal surface with exactly r punctures the set of all puncture numbers for M_g is denoted by $P(M_g)$ For example Jorge and Meeks JM showed by constructing an example g for each r that every positive integer r is a puncture number for the Riemann surface p_l

Minimal Surfaces II Ulrich Dierkes, Stefan Hildebrandt, Albrecht Küster, Ortwin Wohlrab, 2013-03-14 Minimal Surfaces I is an introduction to the field of minimal surfaces and a presentation of the classical theory as well as of parts of the modern development centered around boundary value problems Part II deals with the boundary behaviour of minimal surfaces Part I is particularly apt for students who want to enter this interesting area of analysis and differential geometry which during the last 25 years of mathematical research has been very active and productive Surveys of various subareas will lead the student to the current frontiers of knowledge and can also be useful to the researcher The lecturer can easily base courses of one or two semesters on differential geometry on Vol 1 as many topics are worked out in great detail Numerous computer generated illustrations of old and new minimal surfaces are included to support intuition and imagination Part 2 leads the reader up to the regularity theory for nonlinear elliptic boundary value problems illustrated by a particular and fascinating topic There is no comparably comprehensive treatment of the problem of boundary regularity of minimal surfaces available in book form This long awaited book is a timely and welcome addition to the mathematical literature
