

Multi Criteria Decision Making

Bumho Son

College of Business Administration, CAU

Overview

- Study of problems with several criteria, i.e., **multiple criteria**, instead of a single objective when making a decision
- Three techniques discussed: **goal programming**, the **analytical hierarchy process** and **scoring models**
- **Goal programming**
 - Variation of linear programming considering more than one objective (goals) in the objective function
- **Analytical hierarchy process**
 - Develops a score for each decision alternative based on comparisons of each under different criteria reflecting the decision makers' preferences
- **Scoring models**
 - Based on a relatively simple weighted scoring technique

Mathematics For Decision Making 2vol:

Decision Making Process Denis Bouyssou, Didier Dubois, Henri Prade, Marc Pirlot, 2013-05-10 This book provides an overview of the main methods and results in the formal study of the human decision making process as defined in a relatively wide sense A key aim of the approach contained here is to try to break down barriers between various disciplines encompassed by this field including psychology economics and computer science All these approaches have contributed to progress in this very important and much studied topic in the past but none have proved sufficient so far to define a complete understanding of the highly complex processes and outcomes This book provides the reader with state of the art coverage of the field essentially forming a roadmap to the field of decision analysis The first part of the book is devoted to basic concepts and techniques for representing and solving decision problems ranging from operational research to artificial intelligence Later chapters provide an extensive overview of the decision making process under conditions of risk and uncertainty Finally there are chapters covering various approaches to multi criteria decision making Each chapter is written by experts in the topic concerned and contains an extensive bibliography for further reading and reference

Decision Making with Imperfect Decision Makers Tatiana Valentine Guy, Miroslav Kárný, David H. Wolpert, 2011-11-13 Prescriptive Bayesian decision making has reached a high level of maturity and is well supported algorithmically However experimental data shows that real decision makers choose such Bayes optimal decisions surprisingly infrequently often making decisions that are badly sub optimal So prevalent is such imperfect decision making that it should be accepted as an inherent feature of real decision makers living within interacting societies To date such societies have been investigated from an economic and gametheoretic perspective and even to a degree from a physics perspective However little research has been done from the perspective of computer science and associated disciplines like machine learning information theory and neuroscience This book is a major contribution to such research Some of the particular topics addressed include How should we formalise rational decision making of a single imperfect decision maker Does the answer change for a system of imperfect decision makers Can we extend existing prescriptive theories for perfect decision makers to make them useful for imperfect ones How can we exploit the relation of these problems to the control under varying and uncertain resources constraints as well as to the problem of the computational decision making What can we learn from natural engineered and social systems to help us address these issues

Dynamical Aspects in Fuzzy Decision Making Yuji Yoshida, 2013-06-05 The concept of fuzziness inspired by Zadeh 1965 brings us fruitful results when it is applied to problems in decision making Recently problems in fuzzy decision making are getting more complex and one of the most complex factors is dynamics in systems Dynamical approach to fuzzy decision making has been proposed by Bellman and Zadeh's celebrated paper Decision making in a fuzzy environment 1970 The idea has developed into fuzzy mathematical programming and has been applied in many fields including management science operations research control theory engineering systems analysis computer science mathematical finance etc Dynamic programming advocated in Bellman's book Dynamic programming 1957 is one of the most powerful tools to deal with dynamics in systems and Bellman and Zadeh has proposed the optimality principle in fuzzy decision making by 1970 introducing fuzzy dynamic programming Fuzzy dynamic programming and fuzzy mathematical programming has been making remarkable progress after they were given life by Bellman and Zadeh's paper 1970 In this volume various kinds of dynamics not only time but also structure of systems are considered This volume contains ten reviewed papers which deal with dynamics in theory and applications and whose topics are potentially related to dynamics and are expected to develop dynamical study in near future first fuzzy dynamic programming is reviewed from a viewpoint of its origin and consider its development in theory and applications

Markov Processes for Stochastic Modeling Oliver Ibe, 2008-09-02 Markov processes are used to model systems with limited memory They are used in many areas including communications systems transportation networks image segmentation and analysis biological systems and DNA sequence analysis random atomic motion and diffusion in physics social mobility population studies epidemiology animal and insect migration queueing systems resource management dams financial engineering actuarial science and decision systems This book which is written for upper level undergraduate and graduate students and researchers presents a unified presentation of Markov processes In addition to traditional topics such as Markovian queueing system the book discusses such topics as continuous time random walk correlated random walk Brownian motion diffusion processes hidden Markov models Markov random fields Markov point processes and Markov chain Monte Carlo Continuous time random walk is currently used in econophysics to model the financial market which has traditionally been modelled as a Brownian motion Correlated random walk is popularly used in ecological studies to model animal and insect movement Hidden Markov models are used in speech analysis and DNA sequence analysis while Markov random fields and Markov point processes are used in image analysis Thus the book is designed to have a very broad appeal Provides the practical current applications of Markov processes Coverage of HMM Point processes and Monte Carlo Includes enough theory to help students gain thorough understanding of the subject

Principles can be immediately applied in many specific research projects saving researchers time End of chapter exercises provide reinforcement practice and increased understanding to the student

From Curve Fitting to Machine Learning Achim Zeileis, 2011-07-28 The analysis of experimental data is at heart of science from its beginnings But it was the advent of digital computers that allowed the execution of highly non linear and increasingly complex data analysis procedures methods that were completely unfeasible before Non linear curve fitting clustering and machine learning belong to these modern techniques which are a further step towards computational intelligence The goal of this book is to provide an interactive and illustrative guide to these topics It concentrates on the road from two dimensional curve fitting to multidimensional clustering and machine learning with neural networks or support vector machines Along the way topics like mathematical optimization or evolutionary algorithms are touched All concepts and ideas are outlined in a clear cut manner with graphically depicted plausibility arguments and a little elementary mathematics The major topics are extensively outlined with exploratory examples and applications The primary goal is to be as illustrative as possible without hiding problems and pitfalls but to address them The character of an illustrative cookbook is complemented with specific sections that address more fundamental questions like the relation between machine learning and human intelligence These sections may be skipped without affecting the main road but they will open up possibly interesting insights beyond the mere data message All topics are completely demonstrated with the aid of the commercial computing platform Mathematica and the Computational Intelligence Packages CIP a high level function library developed with Mathematica s programming language on top of Mathematica s algorithms CIP is open source so the detailed code of every method is freely accessible All examples and applications shown throughout the book may be used and customized by the reader without any restrictions The target readerships are students of computer science and engineering as well as scientific practitioners in industry and academia who deserve an illustrative introduction to these topics Readers with programming skills may easily port and customize the provided code
