spin aligned carriers in organic semiconductors is spin pumping where magnons in the FM substrate generate spin aligned carriers in the organic layer at the FM organic interface The third volume deals mainly with magnetic field effect in organic devices Several spin mixture processes that lead to magnetic field effect in devices and films are thoroughly discussed such as hyperfine interaction direct spin orbit coupling indirect spin orbit coupling via g triplet triplet annihilation and thermal spin alignment The similarity between the magnetic field effect obtained in optoelectronic devices based on organic semiconductors and the novel hybrid organic inorganic semiconductors is also a subject of intense interest The fourth volume deals with spin in molecular films and devices It includes thorough discussion of spin exchange interaction that leads to organic ferromagnets as well as manifestation of various spin interactions in thin molecular films and devices **GROUP**
