 Sharon L. Senk,Denisse R. Thompson,2020-07-24 The Curriculum and Evaluation Standards for School Mathematics
 published by the National Council of Teachers of Mathematics in 1989 set forth a broad vision of mathematical content and
 pedagogy for grades K 12 in the United States These Standards prompted the development of Standards based mathematics
 curricula What features characterize Standards based curricula How well do such curricula work To answer these questions
 the editors invited researchers who had investigated the implementation of 12 different Standards based mathematics
 curricula to describe the effects of these curricula on students learning and achievement and to provide evidence for any
 claims they made In particular authors were asked to identify content on which performance of students using Standards
 based materials differed from that of students using more traditional materials and content on which performance of these
 two groups of students was virtually identical Additionally four scholars not involved with the development of any of the
 materials were invited to write critical commentaries on the work reported in the other chapters Section I of Standards
 Based School Mathematics Curricula provides a historical background to place the current curriculum reform efforts in
 perspective a summary of recent recommendations to reform school mathematics and a discussion of issues that arise when
 conducting research on student outcomes Sections II III and IV are devoted to research on mathematics curriculum projects
 for elementary middle and high schools respectively The final section is a commentary by Jeremy Kilpatrick Regents
 Professor of Mathematics Education at the University of Georgia on the research reported in this book It provides a historical
 perspective on the use of research to guide mathematics curriculum reform in schools and makes additional
 recommendations for further research In addition to the references provided at the end of each chapter other references
 about the Standards based curriculum projects are provided at the end of the book This volume is a valuable resource for all
 participants in discussions about school mathematics curricula including professors and graduate students interested in
 mathematics education curriculum development program evaluation or the history of education educational policy makers
 teachers parents principals and other school administrators The editors hope that the large body of empirical evidence and
 the thoughtful discussion of educational values found in this book will enable readers to engage in informed civil discourse
 about the goals and methods of school mathematics curricula and related research **Official Gazette** Philippines,1966
