Primate Males Peter M. Kappeler, 2000-05-04 The size and composition of primate groups varies tremendously across species within species and within groups over time The most variable quantity is the number of adult males In some groups single males can monopolize access to several females whereas reproduction is shared among several males in other groups This variation lies at the heart of understanding adaptive variation among social systems Whether groups contain single or multiple males has important consequences for reproductive strategies of both sexes and also shapes these animals morphology and behaviour Written by leading authorities this book provides an extensive overview of variation in group composition across all major primate taxa using up to date reviews case studies evolutionary theory and theoretical models setting primates into context with birds and other mammals It will become a firm favorite with all those interested in the behavioural ecology of primates

The Behavioral Ecology of the Tibetan Macaque Jin-Hua Li, Lixing Sun, Peter M. Kappeler, 2019-11-18 This open access book summarizes the multi disciplinary results of one of China's main primatological research projects on the endemic Tibetan macaque *Macaca thibetana* which had continued for over 30 years but which had never been reported on systematically Dedicated to this exceptional Old World monkey this book makes the work of Chinese primatologists on the social behavior cooperation culture cognition group dynamics and emerging technologies in primate research accessible to the international scientific community One of the most impressive Asian monkeys and the largest member of its genus the Tibetan macaque deserves to be better known This volume goes a long way towards bringing this species into the spotlight with many excellent behavioral analyses from the field Frans de Waal Professor of Psychology Emory University USA Macaques matter To understand primate patterns and trends and to gain

important insight into humanity we need to augment and expand our engagement with the most successful and widespread primate genus aside from Homo This volume focuses on the Tibetan macaque a fascinating species with much to tell us about social behavior physiology complexity and the macaque knack for interfacing with humans This book is doubly important for primatology in that beyond containing core information on this macaque species it also reflects an effective integrated collaboration between Chinese scholars and a range of international colleagues exactly the type of collaborative engagement primatology needs This volume is a critical contribution to a global primatology Agust n Fuentes Professor of Anthropology University of Notre Dame USA I have many fond memories of my association with Mt Huangshan research beginning in 1983 when together with Professor Qishan Wang we established this site It is such a beautiful place and I miss it It is gratifying to see how far research has progressed since we began work there becoming more internationalized and very much a collaborative endeavor under the long term direction of Professor Jin Hua Li and colleagues This book highlights the increased interest in this species representing a variety of disciplines ranging from macro aspects of behavior cognition and sociality to micro aspects of microbes parasites and disease authored by a group of renowned Chinese and international primatologists I applaud their efforts and expect more interesting work to come from this site in the years ahead Kazuo Wada Professor Emeritus Kyoto University Japan **Conservation Biology and the Black-footed Ferret** Ulysses S.

Seal,1989-01-01 The presentations and discussions clarified certain controversial issues in conservation and wildlife biology including factors influencing the viability of small wild and captive populations minimum viable population sizes in wild and captive populations and the consequences of small founder numbers for recovery of the species These papers were useful in the decision making stage of the recovery program and will assist in the return of the species to the wild the goal of a recovery program Visuomotor Coordination Jorg Peter Ewert,Michael A. Arbib,2013-06-29 Various brain areas of mammals can phylogenetically be traced back to homologous structures in amphibians The amphibian brain may thus be regarded as a kind of microcosm of the highly complex primate brain as far as certain homologous structures sensory functions and assigned ballistic pre planned and pre programmed motor and behavioral processes are concerned A variety of fundamental operations that underlie perception cognition sensorimotor transformation and its modulation appear to proceed in primate s brain in a way understandable in terms of basic principles which can be investigated more easily by experiments in amphibians We have learned that progress in the quantitative description and evaluation of these principles can be obtained with guidance from theory Modeling supported by simulation is a process of transforming abstract theory derived from data into testable structures Where empirical data are lacking or are difficult to obtain because of structural constraints the modeler makes assumptions and approximations that by themselves are a source of hypotheses If a neural model is then tied to empirical data it can be used to predict results and hence again to become subject to experimental tests whose resulting data in turn will lead to further improvements of the model By means of our present models of visuomotor coordination and

its modulation by state dependent inputs we are just beginning to simulate and analyze how external information is represented within different brain structures and how these structures use these operations to control adaptive behavior

Indonesian Primates Sharon Gursky-Doyen, Jatna Supriatna, 2010-01-15 Indonesia possesses the second largest primate population in the world with over 33 different primate species Although Brazil possesses more primate species Indonesia outranks it in terms of its diversity of primates ranging from prosimians slow lorises and tarsiers to a multitude of Old World Monkey species macaques langurs proboscis monkeys to lesser apes siamangs gibbons and great apes orangutans The primates of Indonesia are distributed throughout the archipelago Partly in response to the number of primates distributed throughout the Indonesian archipelago Indonesia is classified as the home of two biodiversity hotspots Wallacea and Sundaland In order to be classified as a hotspot an area must have a large proportion of endemic species coupled with a high degree of threat including having lost more than 70% of its original habitat Two areas within Indonesia meet these criteria The tremendous diversity of primates in Indonesia in conjunction with the conservation issues facing the primates of this region created a need for this volume Reptile Biodiversity Roy W. McDiarmid, 2012-01-10 Authoritative and

comprehensive provides an up to date description of the tool box of methods for inventorying and monitoring the diverse spectrum of reptiles All biodiversity scientists will want to have it during project planning and as study progresses A must for field biologists conservation planners and biodiversity managers Jay M Savage San Diego State University Kudos to the editors and contributors to this book From the perspective of a non ecologist such as myself who only occasionally needs to intensively sample a particular site or habitat the quality and clarity of this book has been well worth the wait Jack W Sites Jr

Mate Choice Paul Patrick Gordon Bateson, 1983-04-28 Twenty one specially commissioned articles provide a clear picture of the current state of thinking about mate choice Brings together modern thinking on the various functions of mate choice and its role in evolution **The Squirrel Monkey** Leonard A. Rosenblum, Robert W. Cooper, 2013-11-06 The Squirrel

Monkey is devoted to the common South American squirrel monkey *Saimiri sciureus* In light of the growing number of squirrel monkeys being established each year in many laboratories there appeared the need to pool existing knowledge in concise form The present volume the first of its kind on any single primate attempts to meet this need The topics that have been selected cover thoroughly areas of research in which *Saimiri* has been utilized This material ranges widely from taxonomy and behavioral studies through husbandry and clinical management of the species to investigations in aerospace medicine and in a number of basic biological sciences Since the problems encountered in the squirrel monkey though sometimes taking a particular form are not unique in principle the authors have attempted to provide an appropriate phylogenetic context for their material It is hoped as a result that this compendium may serve as a valuable source of information during various phases of work on other subjects of primatological and comparative biological investigation as well

Fox Breeders Gazette, 1924 **Wildlife Conservation on Farmland: Conflict in the countryside** David Whyte

Macdonald, Ruth Feber, 2015 Many of the encounters between farming and wildlife especially vertebrates involve some level of conflict which can cause disadvantage to both the wildlife and the people involved Through a series of WildCRU case studies this volume investigates the sources of the problems and ultimately of the threats to conservation discussing a variety of remedies and mitigations and demonstrating the benefits of evidence based inter disciplinary policy *The Mandrill* Alan F. Dixson, 2015-11-12 Living in the remote forests of western central Africa the mandrill *Mandrillus sphinx* is notoriously elusive and has evaded scientific scrutiny for decades Yet it is the largest and most sexually dimorphic of all the Old World monkeys and perhaps the most colourful of all the mammals Synthesising the results of more than twenty five years of research this is the first extensive treatment of the mandrill s reproductive and behavioural biology Dixson explores in detail the role that sexual selection has played in shaping the mandrill s evolution covering mechanisms of mate choice intra sexual competition sperm competition and cryptic female choice Bringing to life through detailed descriptions and rich illustrations the mandrill s communicatory biology and the functions of its brightly coloured adornments this book sheds new light on the evolutionary biology of this fascinating primate *The Mating Season* Pelham Grenville Wodehouse, 1947 **Red Panda** Angela R. Glatston, 2010-11-25 Red Panda Biology and Conservation of the First Panda provides a broad based overview of the biology of the red panda *Ailurus fulgens* A carnivore that feeds almost entirely on vegetable material and is colored chestnut red chocolate brown and cream rather than the expected black and white This book gathers all the information that is available on the red panda both from the field and captivity as well as from cultural aspects and attempts to answer that most fundamental of questions What is a red panda Scientists have long focused on the red panda s controversial taxonomy Is it in fact an Old World procyonid a very strange bear or simply a panda All of these hypotheses are addressed in an attempt to classify a unique species and provide an in depth look at the scientific and conservation based issues urgently facing the red panda today Red Panda not only presents an overview of the current state of our knowledge about this intriguing species but it is also intended to bring the red panda out of obscurity and into the spotlight of public attention Wide ranging account of the red panda *Ailurus fulgens* covers all the information that is available on this species both in and ex situ Discusses the status of the species in the wild examines how human activities impact on their habitat and develops projections to translate this in terms of overall panda numbers Reports on status in the wild looks at conservation issues and considers the future of this unique species Includes contributions from long standing red panda experts as well as those specializing in fields involving cutting edge red panda research *Chemical Signals in Vertebrates 12* Marion L East, Martin Dehnhard, 2013-02-26 Three invited international experts present overviews of recent developments in key fields and will submit chapters for the book Jane Hurst from Liverpool University in the UK presents an overview on the function mechanisms and evolution of chemical signals Penelope Hawkins from the University of Western Australia will detail the importance of male odors in female mate choice and the priming of female reproduction and Francesco Bonadonna from

Lemur Social Systems and Their Ecological Basis J. Ganzhorn, P.M. Kappeler, 2013-06-29 The past decade has seen a steady increase in studies of lemur behavior and ecology As a result there is much novel information on newly studied populations and even newly discovered species that has not yet been published or summarized In fact lemurs have not been the focus of an international symposium since the Prosimian Biology Conference in London in 1972 Moreover research on lemurs has reached a new quality by addressing general issues in behavioral ecology and evolutionary biology Although lemurs provide important comparative information on these topics this aspect of research on lemurs has not been reviewed and compared with similar studies in other primate radiations Thus as did many in the field we felt that the time was ripe to review and synthesize our knowledge of lemur behavioral ecology Following an initiative by Gerry Doyle we organized a symposium at the XIVth Congress of the International Primatological Society in Strasbourg France where 15 contributions summarized much new information on lemur social systems and their ecological basis This volume provides a collection of the papers presented at the Strasbourg symposium plus two reports from recently completed field projects Each chapter was peer reviewed typically by one lemurologist and one other biologist The first three chapters present novel information from the first long term field studies of three enigmatic species Sterling describes the social organization of *Daubentonia madagascariensis* showing that aye aye ranging patterns deviate from those of all other nocturnal primates

The Life History of the Parental Shield Bug, *Parastrachia japonensis* Lisa Filippi, Shintaro Nomakuchi, 2022-10-13 This book presents the discoveries made during nearly three decades of research on the parental shield bug *Parastrachia japonensis* inhabiting Kyushu Island Japan *P. japonensis* has evolved a unique and fascinating life history characterized by extreme behavioral and physiological adaptations that have culminated in a singularly dependent relationship with its lone host tree *Schoepfia jasminodora* Olacaceae which is a generally scarce and unreliable resource It is expected that the evolution of parental care behaviors in the strictly semelparous *P. japonensis* was more directly influenced by the benefit to females that arises from enhanced survivorship of current offspring rather than any possible cost the females might incur in terms of reduced future reproductive success because no future reproduction is possible The authors explain how the different parental cares in this species enhance offspring survivorship in the context of the ecological conditions it has experienced over evolutionary time The book begins with a recap of the earliest studies the reports through 1991 and then introduces the many fascinating aspects of the life history neurobiology physiology and behavior of *P. japonensis* that have been newly discovered since and those aspects that have been confirmed through experimentation over the past thirty years This comprehensive review of information will be useful for comparative studies of parental care in other semelparous and iteroparous organisms experiencing both similar and different ecological constraints The book will be

of academic interest to undergraduate and graduate students of entomology zoology behavior and behavioral ecology

How Primates Eat Joanna E. Lambert, Margaret A. H. Bryer, Jessica M. Rothman, 2024-07-30 Exploring everything from nutrients to food acquisition and research methods a comprehensive synthesis of the study of diet and feeding in nonhuman primates What do we mean when we say that a diet is nutritious Why can some animals get all the energy they need from eating leaves while others would perish on such a diet Why don't mountain gorillas eat fruit all day as chimpanzees do Answers to these questions about food and feeding are among the many tasty morsels that emerge from this authoritative book Informed by the latest scientific tools and millions of hours of field and laboratory work on species across the primate order and around the globe this volume is an exhaustive synthesis of our understanding of what why and how primates eat State of the art information presented at physiological behavioral ecological and evolutionary scales will serve as a road map for graduate students researchers and practitioners as they work toward a holistic understanding of life as a primate and the urgent conservation consequences of diet and food availability in a changing world
