Pathogenesis And Treatment Of Prostate Obstruction:

Prostatic Obstruction Christopher R. Chapple, 2012-12-06 The human prostate gland is of undoubted importance in reproductive physiology and is one of the commonest causes of clinical urological problems in the male patient Despite the wealth of published literature relating to the prostate gland surprisingly little is understood about its neural innervation the influence of pharmacological factors and its precise physiological functions Indeed benign disorders of the prostate gland including benign prostatic hyperplasia bladder neck dyssynergia and inflammatory disorders of the prostate prostatitis prostatodynia although well recognised clinically are as yet poorly characterised and understood It was not until the late 1960s that the subject of urodynamics which for the first time allowed scientific assessment of the function of the lower urinary tract was introduced The first section of this book considers recent advances in our understanding of the innervation of the bladder and prostate gland and the changes in bladder function which accompany prostate mediated bladder outflow obstruction The clinical consequence of benign prostatic hyperplasia in many patients is bladder outflow obstruction and although the traditional treatment of these conditions is by the use of ablative surgery in recent years a number of new modalities have been investigated and are reviewed in the second section of the book **Prostatic Obstruction**

Principles and Practice of Geriatric Surgery Ronnie Ann Rosenthal, Michael E. Zenilman, Mark R. Katlic, 2011-07-12 In the preface to this impressive and well produced book the editors state that their aim is not to describe a new surgical specialty since most surgeons will soon need to be geriatric surgeons but to assemble a comprehensive account that will allow all providers of healthcare to the elderly to understand the issues involved in choosing surgery as a treatment option for their patients This is a useful book that deserves to do well I hope that the editors and their publisher will have the stamina to make this the first of several editions as it is clear that updated information about surgery in the elderly will be required to keep pace with this important field NEJM Book Review

Benign Prostatic Hyperplasia Gerhard Jakse, Christian Bouffieux, Jean de Leval, Rudi A. Janknegt, 2012-12-06 An intense discussion has recently begun regarding current standards in the diagnosis and treatment of benign prostatic hyperplasia BPH A number of factors have led to this discussion In an increasing proportion of aging men for example BPH causes so called obstructive symptoms that must be relieved by medical or operative means This entails an immense social and economic impact in terms of health costs In addition recent data indicate the most frequently performed operation for BPH transurethral resection of the prostate is associated with a higher risk of death due to cardiac disease than open prostatectomy Furthermore studies using the recently developed technique of uro dynamics to assess bladder outflow obstruction reveal that about 20% 30% of patients treated with transurethral resection or open prostatectomy are actually not obstructed This means that these patients do not receive the most effective therapy Finally various new treatment modalities have been developed including medical treatment directed at endocrine pathways in the prostatic cells balloon dilatation spirals temporary or permanent stents and the application of heat in hyperthermia or thermo therapy The contributions to this volume were selected from a symposium on the diagnosis and

treatment of BPH They are intended to provide a comprehensive review of the state of the art in treating BPH Aachen Liege
