Pathways To Suicide A Survey Of Self Destructive Behaviors:

Pathways to Suicide Ronald W. Maris,1981-01-01 *Pathways to Suicide* Ronald W. Maris,Bernard Melvin Lazerwitz,1981 **Comprehensive Textbook of Suicidology** Alan Lee Berman,Morton M. Silverman,Bruce Michael Bongar,2000-08-10 Multidisciplinary and comprehensive in scope this volume serves as an authoritative overview of scientific knowledge about suicide and its prevention providing a foundation in theory research and clinical applications Issues relevant to clinical case management are highlighted and various treatment modalities are discussed in light of the latest research findings *Suicidology* Ronald W. Maris,2019-03-04 Integrating research from multiple disciplines this text provides a comprehensive perspective on suicide and examines what works in prevention and intervention The author is a pioneering researcher and clinician who addresses the classification prevalence and assessment of suicide and self destructive behaviors and explores risk factors at multiple levels from demographic variables personality traits psychiatric diagnoses and neurobiological factors to the social and cultural context Student friendly features include text boxes that dive deeply into specific issues instructive figures and tables thought provoking clinical cases and engaging examples from literature and popular culture The text reviews medical and psychosocial treatment and prevention approaches discusses ways to help those bereaved by suicide and considers issues of professional liability *The Idea of Suicide* Michael J. Kral,2019-05-21 This book is about a new theory of suicide as cultural mimesis or as an idea that is internalized from culture Written as part of a new critical focus in suicidology this volume moves away from the dominant strictly scientific understanding of suicide as the result of a mental disorder and towards positioning suicide as an anthropologically salient community driven phenomenon Written by a leading researcher in the field this volume presents a conception of suicide as culturally scripted and it demonstrates how suicide becomes a cultural idiom of distress that for some can become a normative option *Suicide Science* Thomas Joiner,M. David Rudd,2007-05-08 Suicide kills and maims victims traumatizes loved ones preoccupies clinicians and costs health care and emergency agencies fortunes It should therefore demand a wealth of theoretical scientific and fiduciary attention But in many ways it has Why Although the answer to this question is multi faceted this volume not supposes that one answer to the question is a lack of elaborated and penetrating theoretical approaches The authors of this volume were challenged to apply their considerable theoretical wherewithal to this state of affairs They have risen to this challenge admirably in that several ambitious ideas are presented and developed If ever a phenomenon should inspire humility it is suicide and the volume s authors realize this Although several far reaching views are proposed they are pitched as first approximations with the primary goal of stimulating still more conceptual and empirical work A pressing issue in suicide science is the topic of clinical interventions and clinical approaches more generally Here too this volume contributes covering such topics as therapeutics and prevention comorbidity special populations and clinical risk factors **Position Papers from the Third National Injury Control Conference** ,1992 Routledge Library

Editions: Women and Crime Various Authors, 2022-07-30 This set reissues five books on the subject of women and crime. The titles which were originally published between 1930 and 1996 include a book of case studies of female criminals, a comprehensive annotated bibliography on the social conflict and change of women in crime, and essays which examine the construction of women in criminology. This set will be of particular interest to students of both criminology and women's studies.

Death Attitudes and the Older Adult Adrian Tomer, 2018-10-24 This innovative and informative new text bridges the fields of gerontology and thanatology.

Understanding Suicide and Its Prevention Federico Sanchez, 2010-06 Finally a book that explains suicide using the latest research in suicidology. A must read for mental health professionals and the survivors of suicide who want to understand why suicide happens. The material in this book should be incorporated into the curriculum of psychology and psychiatry because suicide is such a vital topic that is hardly covered in medical schools due to the lack of a coherent theory of the brain in general and suicide in particular. This is an important book for all professionals who deal with mental disorders in general and suicide in particular. It is the author's fifth book where suicide is explained not as a mysterious process but as a natural consequence of the reactions of the brain under certain conditions when suffering mental disorders. The author begins with a brief summary of the statistics of the whos, the hows, and the wheres of suicide. This gives us a clear idea of the magnitude of the problem of suicide, of the cost not only in lives but of the emotional toll of the survivors as well as the financial burdens on society as a whole. Then as an important first step to understanding the medical community's standard approaches to mental disease, he reviews briefly the current psychiatric terminology and the diagnostic tools concerning mental disorders. He presents the most accepted current theories and models of suicide. He explains what a psychiatric emergency is and what to expect if one ever encounters such a situation. And he explains how suicide risk assessment is currently done along with other important considerations. He proceeds to explain in everyday language, where possible, his theory of how the brain works, beginning with a simple explanation of how neurons communicate with each other. Later he explains how the brain controls the body and how we see with the back of our heads, how memory systems become a logical extension or expansion of our sensory and motor systems. Awareness and attention are introduced first as an evolutionary tool that aids the senses gather more information from the environment and ultimately as tools that aid in thinking, reasoning, and constructing our past, our lives, and our identities. But all this would mean nothing without the introduction of emotions and how the brain constructs contexts. He explains how emotions are an integral part of memories and how these are related to contexts. How basically the brain has created a very concise and compact filing memory system. A clear explanation of how emotions are triggered, regulated, and dissipated is next. These lead to a learned discussion of how these various systems can go haywire, causing mental disorders. A brief but perhaps new and revolutionary approach to these mental disorders is presented next, including Obsessive Compulsive Disorder, Delirium, Dementia, and Other Amnestic Disorders, Manic Depression, and Depression, and Schizophrenia. Ultimately, it becomes clear

how under certain conditions these disorders can lead to suicide The difference between attempters and completers is also explained He then presents a suicide autopsy as an exercise to show how varied the opinions of experts in the field of suicidology are and compares it to his own theories and lets the reader decide for himself who is closer to the truth The fallacy of many expert opinions of where research needs to go is presented The book gives a few words of advice on various therapies and the rationality of their approaches and cautions against their limitations The book devotes a chapter to suicide prevention in the military and how these efforts are bound to fail and another chapter on suicide prevention The author makes important suggestions of how to prevent suicide and lessen suicide rates particularly among the young And lastly a chapter is devoted to the specifics of grief for suicide survivors
