**Pattern Classification** Richard O. Duda, Peter E. Hart, David G. Stork, 2012-11-09 The first edition published in 1973 has become a classic reference in the field. Now with the second edition, readers will find information on key new topics such as neural networks and statistical pattern recognition, the theory of machine learning, and the theory of invariances. Also included are worked examples, comparisons between different methods, extensive graphics, expanded exercises, and computer project topics. An Instructor's Manual presenting detailed solutions to all the problems in the book is available from the Wiley editorial department.

**Ensemble Learning: Pattern Classification Using Ensemble Methods (Second Edition)** Lior Rokach, 2019-02-27 This updated compendium provides a methodical introduction with a coherent and unified repository of ensemble methods, theories, trends, challenges, and applications. More than a third of this edition comprised of new materials highlighting descriptions of the classic methods and extensions and novel approaches that have recently been introduced. Along with algorithmic descriptions of each method, the settings in which each method is applicable and the consequences and tradeoffs incurred by using the method are succinctly featured. R code for implementation of the algorithm is also emphasized. The unique volume provides researchers, students, and practitioners in industry with a comprehensive, concise, and convenient resource on ensemble learning methods.

*Handbook of Pattern Recognition and Computer Vision* Chi-hau Chen, 2010 Both pattern recognition and computer vision have experienced rapid progress in the last twenty-five years. This book provides the latest advances on pattern recognition and computer vision along with their many applications. It features articles written by renowned leaders in the field while topics are presented in readable form to a wide range of readers. The book is divided into five parts: basic methods in pattern recognition, basic methods in computer vision and image processing, recognition applications, life science and human identification, and systems and technology. There are eight new chapters on the latest developments in life sciences using pattern recognition, as well as two new chapters on pattern recognition in remote sensing.

Computer Manual in MATLAB to accompany Pattern Classification David G. Stork, Elad Yom-Tov, 2004-04-08 Computer Manual to Accompany Pattern Classification and its associated MATLAB software is an excellent companion to Duda Pattern Classification 2nd ed. The code contains all algorithms described in Duda as well as supporting algorithms for data generation and visualization. The Manual uses the same terminology as the DH S text and contains step-by-step worked examples including many of the examples and figures in the textbook. The Manual is accompanied by software that is available electronically. The software contains all algorithms in DH S indexed to the textbook and uses symbols and notation as close as possible to the textbook. The code is self-annotating so the user can easily navigate, understand, and modify the code.

*New Soft Computing Techniques for System Modeling, Pattern Classification and Image Processing* Leszek Rutkowski, 2013-03-09

Science has made great progress in the twentieth century with the establishment of proper disciplines in the fields of physics, computer science, molecular biology and many others. At the same time there have also emerged many engineering ideas that are interdisciplinary in nature beyond the realm of such orthodox disciplines. These include for example artificial intelligence, fuzzy logic, artificial neural networks, evolutionary computation, data mining and so on. In order to generate new technology that is truly human friendly in the twenty first century, integration of various methods beyond specific disciplines is required. Soft computing is a key concept for the creation of such human friendly technology in our modern information society. Professor Rutkowski is a pioneer in this field having devoted himself for many years to publishing a large variety of original work. The present volume based mostly on his own work is a milestone in the development of soft computing, integrating various disciplines from the fields of information science and engineering. The book consists of three parts, the first of which is devoted to probabilistic neural networks. Neural excitation is stochastic so it is natural to investigate the Bayesian properties of connectionist structures developed by Professor Rutkowski. This new approach has proven to

be particularly useful for handling regression and classification problems vi Preface in time varying environments

Throughout this book major themes are selected from theoretical subjects that are tightly connected with challenging applications
