Patterns And Configurations In Economic Science:

Patterns and Configurations in Economic Science J.M. Blin, 2013-06-29 This book was born from the belief that in an era of narrowly specialized experts looking beyond the arbitrary borders on one's own field offered the only chance for intellectual survival. The spectacular growth of economics in the past forty years or so has been accompanied by the rapid fragmentation process that seems to characterize the making of any science. If we chose to view this as a symptom of scientific maturity we would be tempted to welcome this process. But as economists we should think of its opportunity cost. In one sense this work attempts to assess the price we have chosen to pay consciously or not to win recognition of our scientific status from other disciplines. If after going through this book the reader comes out with the feeling that this shadow price is not all shadow after all we will have achieved one of our goals. Both the merits and defects of this book stem from the fact that we tried to pursue a different approach in the study of economics. This line of thought originates in the area of pattern recognition and machine learning. For the past two decades a number of applied mathematicians, logicians and engineers have systematically tried to mimic human intelligence in one of its most important functions viz that of identifying and recognizing patterns in an a priori unorganized and confusing environment.

Systems Theory in the Social Sciences BOSSEL, 2013-11-11 In an ever more complex and interrelated world a better understanding of social systems and of the dynamics of their behavior is of crucial importance. Many of the tools holding promise of potentially significant contributions to the analysis of social systems have been or are being developed outside of the social sciences proper mostly the loose collection of diverse scientific approaches called systems science or systems theory. The editors all of whom are involved in social systems analysis have made an attempt in this volume to pull together several aspects of systems science which appear to them to be of particular relevance to the study of social systems. Control systems stochastic systems pattern recognition fuzzy analysis simulation and behavioral models. 29 authors from the disciplines of sociology social psychology political science management science history behavioral science economics mathematics engineering and systems science have contributed to this truly interdisciplinary effort. All of them have made the attempt to write in a manner understandable by the non specialist. It is hoped that this volume will be of particular usefulness to students in the social sciences. Most of the articles are too short to provide much more than an initial stimulation. We trust that the references provided by the authors will allow deeper penetration into particular areas.

Patterns and configuration in economic science J. M. Blin, 1973 *Pattern Recognition Theory and Applications* J. Kittler, V.W. Fu, L.F. Pau, 2012-12-06 This book is the outcome of the successful NATO Advanced Study Institute on Pattern Recognition Theory and Applications held at St Anne's College Oxford in April 1981. The aim of the meeting was to review the recent advances in the theory of pattern recognition and to assess its current and future practical potential. The theme of the Institute the

decision making aspects of pattern recognition with the emphasis on the novel hybrid approaches and its scope a high level tutorial coverage of pattern recognition methodologies counterpointed with contributed papers on advanced theoretical topics and applications are faithfully reflected by the volume The material is divided into five sections 1 Methodology 2 Image Understanding and Interpretation 3 Medical Applications 4 Speech Processing and Other Applications 5 Panel Discussions The first section covers a broad spectrum of pattern recognition methodologies including geometric statistical fuzzy set syntactic graph theoretic and hybrid approaches Its coverage of hybrid methods places the volume in a unique position among existing books on pattern recognition The second section provides an extensive treatment of the topical problem of image understanding from both the artificial intelligence and pattern recognition points of view The two application sections demonstrate the usefulness of the novel methodologies in traditional pattern recognition application areas They address the problems of hardware software implementation and of algorithm robustness flexibility and general reliability The final section reports on a panel discussion held during the Institute

Research in the field of pattern recognition both in theoretical terms and in the area of application continues to flourish Pattern recognition is a fairly diverse field involving researchers whose primary disciplines spread over at least a half dozen fields Possibly because of the great diversity of backgrounds but a common interest in certain broad areas of application the field has grown so rapidly and yet seems to promise at least a similar growth rate for the future This book is a collection containing some of the papers that were presented at the NATO Advanced Study Institute held in Bandol France September 1975 The main purpose of the institute was to present material which would provide a basic background in the field Thus survey papers covering syntactic methods picture processing classification theory and speech recognition were presented This should have provided the listener and we hope now the reader with an acquaintance with the basic tools a look at some of the applications and an appraisal of how each of the particular topics will evolve A more recent addition to the pattern recognition family is the work in the areas of economics and group choice Since the process of recognizing and interpreting patterns is so fundamental it probably is no surprise when a particular discipline is discovered to be amenable to the already developed techniques
