Studies on Reduplication Bernhard Hurch, 2011-12-22 For several reasons mostly inherent to the different developments of generative grammar an increasing number of publications have dealt with reduplication in the past 20 years Reduplication lends itself perfectly as a test field for theories that opt for a non segmental organization of phonology and morphology As it happens frequently then the discussion centers around a rather small set of data for which alternative analysis are offered and which themselves are intended to contribute to the foundation of new theoretical developments The present volume which goes back to a conference on reduplication at the University of Graz Austria offers a broader approach to reduplication not only from different theoretical viewpoints but especially for its phenomenology Across theories a number of highly qualified authors deal with formal and functional perspectives with typological properties with semantics comparative issues the role of reduplication in language acquisition the acquisition of reduplicative systems sign languages creoles and pidgins general grammatical and cognitive principles the picture is completed by a series of language or language family specific studies as on Uto Aztecan Salish Tupi Guarani Moroccan and Cairene Arabic various African languages Chinese Turkish Indo European languages from India etc The overall scope of the conference was to contribute to a new level of discussion of the phenomenon across theories and across specializations and interests Update on Contributor s addresses PDF

MARK ARONOFF The articles included in this section represent recent research on morphological classes which has been independently performed by a number of investigators This work was presented at a symposium that was organized as part of the 1990 1991 annual meeting of the Linguistic Society of America in Chicago in January 1991 Our aim in presenting this work is twofold on the one hand we would like to encourage others interested in morphology to pursue the types of research that we present This is especially important in the study of morphological classes which while they are widespread among the languages of the world are also highly diverse and often quite complex On the other hand we hope to convince researchers in adjacent areas to provide a place for autonomous morphology in their general picture of the workings of language and to pay closer attention to the intricacies of the interaction between morphology and these areas *Optimality Theory in Phonology* John J.
