Synthesis of Adequate Mathematical Descriptions of Physical Processes Yurii Menshykov,2020-08-11 For effective use of the results of computational calculations it is necessary that the computational schemes used correspond to real physical processes so that the schemes are adequate The issue of adequacy is currently poorly understood and there are also no generally accepted criteria of adequacy This book is the first to address the questions of constructing adequate mathematical descriptions of physical processes and their reasonable use in the future for various purposes It proposes two adequacy criteria quantitative and qualitative and describes several possible algorithms for synthesis of cases when the physical process is composed of a system of ordinary differential equations or a mathematical model in algebraic form The algorithms described here will be useful for specialists in areas where methods of mathematical modeling are used such as mechanics *Automatic Controls for Heating and Air Conditioning* K. M. Letherman,2014-05-18 International Series in Heating and Ventilation Volume 15 Automatic Controls for Heating and Air Conditioning Principles and Applications details the relationship between theory and practice in implementing an automated system for thermal regulation The title first deals with the sensors and methods for quantifying the two variables mainly of interest in building services systems temperature and humidity Next the selection covers the application of controls to a number of specific areas of building environmental services The text also discusses controller mechanisms and circuits along with controller characteristics The fifth chapter deals with basic theory of linear automatic control while the sixth chapter talks about the analysis of non linear systems The book will be of great interest to engineers and technicians who deal with cooling and heating systems
