Mathematical Knowledge in Teaching Tim Rowland, Kenneth Ruthven, 2011-01-06 The quality of primary and secondary school mathematics teaching is generally agreed to depend crucially on the subject related knowledge of the teacher However there is increasing recognition that effective teaching calls for distinctive forms of subject related knowledge and thinking Thus established ways of conceptualizing developing and assessing mathematical knowledge for teaching may be less than adequate These are important issues for policy and practice because of longstanding difficulties in recruiting teachers who are confident and

conventionally well qualified in mathematics and because of rising concern that teaching of the subject has not adapted sufficiently. The issues to be examined in Mathematical Knowledge in Teaching are of considerable significance in addressing global aspirations to raise standards of teaching and learning in mathematics by developing more effective approaches to characterizing, assessing and developing mathematical knowledge for teaching. An Investigation of Primary Teachers' Mathematical Pedagogical Content Knowledge Wayne Hawkins, 2012 Abstract In an era of educational reform, investigating teachers' pedagogical content knowledge has implications for many involved in education, from policy makers and curriculum designers to those in teacher education. This thesis proposed a model designed by the researcher used to examine Shulman's 1986 theory of pedagogical content knowledge. In particular, it addressed primary teachers' pedagogical content knowledge required for teaching measurement. By examining teachers' mathematics pedagogical content knowledge, a greater understanding of teachers' professional knowledge was gained, enabling improvement of teacher quality by being able to identify more clearly individual teachers' needs for professional development. This study addressed four specific research questions: How evident is the teacher's depth of mathematical knowledge of measurement within their teaching? How do teachers show that they understand and address the needs of students when teaching? How do teachers demonstrate their general pedagogical knowledge when teaching? How is a teacher's knowledge and practice impacted by other factors when teaching, and what are these major factors? A qualitative research model was used in which four teachers of Years Three and Four participated, providing four individual case studies. Each teacher was interviewed at the commencement of the study, was observed and recorded throughout their teaching of a sequence of measurement lessons, interviewed prior to and following each lesson, and finally responded to a reflective questionnaire two weeks after the sequence of lessons had concluded. Due to the extensive nature of the data, a series of vignettes was written based upon MATHEMATICAL PEDAGOGICAL CONTENT KNOWLEDGE, identifying teaching episodes significant to addressing the research questions. These vignettes contributed to the cross-case analysis (Yin, 2010) along with the other data. The study found that the teachers' knowledge varied considerably in each of the areas of knowledge of teaching, knowledge of students, and knowledge of mathematics. Consequently, the teachers were rated differently in relation to their pedagogical content knowledge, ranging from very weak to strong. These differences were examined in terms of the model, providing evidence that the model effectively explained variations in teachers' pedagogical content knowledge. Factors such as self-efficacy, teacher beliefs, and the culture of the school were also shown to influence each teacher's pedagogical content knowledge. The model was shown to be dynamic, and it clearly identified how and why pedagogical content knowledge varied from one teacher to another. This study has shown that the model used to represent pedagogical content knowledge demonstrated theoretical, methodological, and diagnostic value. This study concludes with a discussion of implications for policy and practice at system level and for teacher education courses for preservice teachers. The findings of this study provide further understanding of teacher

pedagogical content knowledge which is an essential step towards improving teacher quality and teaching practice The evidence suggests that this model could be used for further research into pedagogical content knowledge beyond the teaching of measurement Exploring Mathematics and Science Teachers' Knowledge Hamsa Venkat, Marissa Rollnick, John Loughran, Mike Askew, 2014-05-09 Globally mathematics and science education faces three crucial challenges an increasing need for mathematics and science graduates a declining enrolment of school graduates into university studies in these disciplines and the varying quality of school teaching in these areas Alongside these challenges internationally more and more non specialists are teaching mathematics and science at both primary and secondary levels and research evidence has revealed how gaps and limitations in teachers content understandings can lead to classroom practices that present barriers to students learning This book addresses these issues by investigating how teachers content knowledge interacts with their pedagogies across diverse contexts and perspectives This knowledge practice nexus is examined across mathematics and science teaching traversing schooling phases and countries with an emphasis on contexts of disadvantage These features push the boundaries of research into teachers content knowledge The book s combination of mathematics and science enriches each discipline for the reader and contributes to our understandings of student attainment by examining the nature of specialised content knowledge needed for competent teaching within and across the two domains Exploring Mathematics and Science Teachers Knowledge will be key reading for researchers doctoral students and postgraduates with a focus on Mathematics Science and teacher knowledge research Primary School Teachers' Content Knowledge in Physics and Its Impact on Teaching and Students' Achievement Annika Ohle, 2010 One influencing factor on students achievement is teachers professional knowledge The goal of this dissertation was to assess primary school teachers content knowledge CK of physics as one domain of professional knowledge and analyse the impact of CK on the actual teaching and students learning outcomes in the topic tates of matter and phase transitions A test assessing the teachers CK and a video analysis scheme have been developed to describe the quality of teachers instruction during the lessons in terms of learning process sequencing and content structure Multilevel analyses showed a significant positive impact of teachers CK on students achievement depending on the way the learning opportunities were sequenced within the lesson while no significant influence of content structure could be shown **Primary Mathematics for Trainee Teachers** Marcus Witt, 2014-11-19 With chapter sequencing following the new Curriculum this book supports trainee Primary school teachers to make use of the opportunities presented in the new National Curriculum for effective and engaging Mathematics teaching Covering all of the areas of the new Curriculum for primary mathematics and offering insight into effective teaching this book helps students connect what they need to teach with how it can be taught Exploring opportunities in the new curriculum for creative and imaginative teaching it shows readers how to capitalize on opportunities to develop children s reasoning and problem solving skills It explores how to make links between mathematics and children s lived experiences to enhance their learning and
