Mathematical Explorations With Matlab:

Mathematical Explorations with MATLAB Ke Chen, Peter J. Giblin, A. Irving, 1999-04-15 This book is about the kind of mathematics usually encountered in first year university courses. A key feature of the book is that this mathematics is explored in depth using the popular and powerful package Matlab. The emphasis is on understanding and investigating the mathematics and putting it into practice in a wide variety of modelling situations. In the process the reader will gain some fluency with Matlab, no starting knowledge of the package being assumed.

Differential Equations with MATLAB Mark McKibben, Micah D. Webster, 2014-09-08 A unique textbook for an undergraduate course on mathematical modeling. Differential Equations with MATLAB: Exploration, Applications and Theory provides students with an understanding of the practical and theoretical aspects of mathematical models involving ordinary and partial differential equations (ODEs and PDEs). The text presents a unifying picture inherent to the study and analysis of more than 20 distinct models spanning disciplines such as physics, engineering and finance. The first part of the book presents systems of linear ODEs. The text develops mathematical models from ten disparate fields including pharmacokinetics, chemistry, classical mechanics, neural networks, physiology and electrical circuits. Focusing on linear PDEs, the second part covers PDEs that arise in the mathematical modeling of phenomena in ten other areas including heat conduction, wave propagation, fluid flow through fissured rocks, pattern formation and financial mathematics. The authors engage students by posing questions of all types throughout, including verifying details, proving conjectures, of actual results, analyzing broad strokes that occur within the development of the theory and applying the theory to specific models. The authors' accessible style encourages students to actively work through the material and answer these questions. In addition, the extensive use of MATLAB GUIs allows students to discover patterns and make conjectures.
