Mathematical Model Techniques For Learning Theories:

Mathematical Model Techniques for Learning Theories Gustav Levine, Cletus Joseph Burke, 1972 **Finite Element Method with Applications in Engineering:** Y. M. Desai, T. I. Eldho, A. H. Shah, 2011 The book explains the finite element method with various engineering applications to help students teachers engineers and researchers It explains mathematical modeling of engineering problems and approximate methods of analysis and different approaches **The Mathematical Foundation of Multi-Space Learning Theory** Tai Wang, Mengsiying Li, 2024-03-12 This book explores the measurement of learning effectiveness and the optimization of knowledge retention by modeling the learning process and building the mathematical foundation of multi space learning theory Multi space learning is defined in this book as a micro process of human learning that can take place in more than one space with the goal of effective learning and knowledge retention This book models the learning process as a temporal sequence of concept learning drawing on established principles and empirical evidence It also introduces the matroid to strengthen the mathematical foundation of multi space learning theory and applies the theory to vocabulary and mathematics learning respectively The results show that for vocabulary learning the method can be used to estimate the effectiveness of a single learning strategy to detect the mutual interference that might exist between learning strategies and to predict the optimal combination of strategies In mathematical learning it was found that timing is crucial in both first learning and second learning in scheduling optimization to maximize the intersection effective interval The title will be of interest to researchers and students in a wide range of areas including educational technology learning sciences mathematical applications and mathematical psychology

Mathematical Theories of Machine Learning - Theory and Applications Bin Shi, S. S. Iyengar, 2019-06-12 This book studies mathematical theories of machine learning The first part of the book explores the optimality and adaptivity of choosing step sizes of gradient descent for escaping strict saddle points in non convex optimization problems In the second part the authors propose algorithms to find local minima in nonconvex optimization and to obtain global minima in some degree from the Newton Second Law without friction In the third part the authors study the problem of subspace clustering with noisy and missing data which is a problem well motivated by practical applications data subject to stochastic Gaussian noise and or incomplete data with uniformly missing entries In the last part the authors introduce an novel VAR model with Elastic Net regularization and its equivalent Bayesian model allowing for both a stable sparsity and a group selection **Formal Methods in Developmental Psychology** Jeffrey Bisanz, Charles J. Brainerd, Robert Kail, 2012-12-06 Current and comprehensive Formal Methods in Developmental Psychology reviews and explains the advantages and details of recent methodological advances in developmental psychology The latest progress in the use of mathematical and computer based tools in the formulation of theories and data analysis are discussed Individual chapters describe different approaches to computer simulation and to mathematical modeling as well as the use of these models in a number of substantive areas

including infant vision perception of intelligence spatial knowledge and memory processes This unique contribution to the Springer Series in Cognitive Development allows the reader a better understanding of the many forms of modeling through explicit descriptions of the steps involved in the use of various methods

Time Series in Psychology R. A.M. Gregson, 2014-05-22 First published in 1983 Psychological data are segments of life histories as such they are ordered sequences of observations and by definition time series Yet they are often anything but well behaved what regularities and invariances they have are buried from all but the most persistent investigator The most common methods of representing quantitative results in psychology are frozen outside time thus they deliberately average out much of the sequential structure that holds any sparse clues to the nature of processes within the organism This review whose simple aim is to bring together in an illuminating juxtaposition on basic results in both time series analysis and in experimental psychology thus cuts across traditions within psychology

Learning Theories David C. Leonard, 2002-12-30 Swift changes in educational technology are transforming the landscape of our society and how we transfer knowledge in a digital world Teachers administrators and education students need to stay abreast of these developments Yet while the new educational software technologies and networks may be available the learning theories and methods required to take complete advantage of the tools are often

neglected Learning theories are a crucial element of education studies for anyone involved with students from pre school to higher education and business training This book is a substantive dictionary of over 500 terms relating to learning theories and environments Definitions range from approximately 100 to 700 words and each term is identified by the primary type of learning theory to which it applies cognitivism constructivism behaviorism humanism or organizational learning An annotated bibliography provides further resources to the most important writings about learning theories

Models and Methods in the Philosophy of Science: Selected Essays Patrick Suppes, 2013-03-14 The thirty one papers collected in this volume represent most of the articles that I have published in the philosophy of science and related foundational areas of science since 1970 The present volume is a natural successor to *Studies in the Methodology and Foundations of Science* a collection of my articles published in 1969 by Reidel now a part of Kluwer The articles are arranged under five main headings Part I contains six articles on general methodology The topics range from formal methods to the plurality of science Part II contains six articles on causality and explanation The emphasis is almost entirely on probabilistic approaches Part III contains six articles on probability and measurement The importance of representation theorems for both probability and measurement is stressed Part IV contains five articles on the foundations of physics The first three articles are concerned with action at a distance and space and time the last two with quantum mechanics Part V contains eight articles on the foundations of psychology This is the longest part and the articles reflect my continuing strong interest in the nature of learning and perception Within each part the articles are arranged chronologically I turn now to a more detailed overview of the content The first article of Part I concerns the role of formal methods in the philosophy of science Here I discuss what is the new role for formal methods now that the imperialism of logical positivism has disappeared
