*Elements of Psychophysical Theory* Jean-Claude Falmagne, 2002 This book presents the basic concepts of classical psychophysics derived from Gustav Fechner as seen from the perspective of modern measurement theory The theoretical discussion is elucidated with examples and numerous problems and solutions to one quarter of the problems are provided in the text      *Kahnemann and Tversky and the making of behavioral economics* Floris Heukelom, 2009      **Probability in**

**Social Science** S. Goldberg, 2012-12-06 Birkhauser Boston Inc will publish a series of carefully selected monographs in the area of mathematical modeling to present serious applications of mathematics for both the undergraduate and the professional audience Some of the monographs to be selected and published will appeal more to the professional mathematician and user of mathematics serving to familiarize the user with new models and new methods Some like the present monograph will stress the educational aspect and will appeal more to a student audience either as a textbook or as additional reading We feel that this first volume in the series may in itself serve as a model for our program Samuel Goldberg attaches a high priority to teaching students the art of modeling that is to use his words the art of constructing useful mathematical models of real world phenomena We concur It is our strong conviction as editors that the connection between the actual problems and their mathematical models must be factually plausible if not actually real As this first volume in the new series goes to press we invite its readers to share with us both their criticisms and their constructive suggestions

**Analysing and Aiding Decision Processes** P. Humphreys, O. Svenson, A. Vári, 2000-04-01 This book contains an edited selection of papers presented at the Eighth Research Conference on Subjective Probability Utility and Decision Making held in Budapest Together they span a wide range of new developments in studies of decision making the practice of decision analysis and the development of decision aiding technology The volume is arranged in sections Societal Decision Making Organizational Decision Making Aiding the Structuring of Small Scale Decision Problems and Tracing Decision Processes The emphasis is on decision processes and structures and their applications rather than formal modelling in isolation thus reflecting current developments in research and practice which follow from the understanding of the nature and operation of decision theoretical models gained during the 1970 s The fifth section A Symposium on the Validity of Studies on Heuristics and Biases is of a different nature The papers take stock of the considerable volume of work investigating heuristics and biases in decision making over the past decade and their implication for theory and practice      *The Design Inference* William A. Dembski, 1998-09-13 This book presents a reliable method for detecting intelligent causes the design inference

The design inference uncovers intelligent causes by isolating the key trademark of intelligent causes specified events of small probability Design inferences can be found in a range of scientific pursuits from forensic science to research into the origins of life to the search for extraterrestrial intelligence This challenging and provocative book shows how incomplete undirected causes are for science and breathes new life into classical design arguments It will be read with particular interest by philosophers of science and religion other philosophers concerned with epistemology and logic probability and complexity theorists and statisticians

Connectionist Representations of Tonal Music Michael R. W. Dawson, 2018-03-13 Previously artificial neural networks have been used to capture only the informal properties of music However cognitive scientist Michael Dawson found that by training artificial neural networks to make basic judgments concerning tonal music such as identifying the tonic of a scale or the quality of a musical chord the networks revealed formal musical properties that differ dramatically from those typically presented in music theory For example where Western music theory identifies twelve distinct notes or pitch classes trained artificial neural networks treat notes as if they belong to only three or four pitch classes a wildly different interpretation of the components of tonal music Intended to introduce readers to the use of artificial neural networks in the study of music this volume contains numerous

case studies and research findings that address problems related to identifying scales keys classifying musical chords and learning jazz chord progressions A detailed analysis of the internal structure of trained networks could yield important contributions to the field of music cognition

*Beyond Self-Interest* Jane J. Mansbridge, 1990-04-15 A dramatic transformation has begun in the way scholars think about human nature Political scientists psychologists economists and evolutionary biologists are beginning to reject the view that human affairs are shaped almost exclusively by self interest a view that came to dominate social science in the last three decades In *Beyond Self Interest* leading social scientists argue for a view of individuals behavior and social organization that takes into account the powerful motivations of duty love and malevolence Economists who go beyond economic man psychologists who go beyond stimulus response evolutionary biologists who go beyond the selfish gene and political scientists who go beyond the quest for power come together in this provocative and important manifesto The essays trace from the ancient Greeks to the present the use of self interest to explain political life They investigate the differences between self interest and the motivations of duty and love showing how these motivations affect behavior in prisoners dilemma interactions They generate evolutionary models that explain how altruistic motivations escape extinction They suggest ways to model within one individual the separate motivations of public spirit and self interest investigate public spirit and self interest investigate public spirit in citizen and legislative behavior and demonstrate that the view of democracy in existing Constitutional interpretations is not based on self interest They advance both human evil and mothering as alternatives to self interest this last in a penetrating feminist critique of the contract model of human interaction

**Risk Taking** Zur Shapira, 1995-01-25 Classical economic theory assumes that people in risk situations follow a course of action based on a rational consistent assessment of likely outcomes But as Zur Shapira demonstrates in *Risk Taking* corporate managers consistently stray from the prescribed path into far more subjective territory *Risk Taking* offers a critical assessment of the relationship between theory and action in managerial decision making Shapira offers a definitive account of the classical conception of risky decision making which derives behavioral prescriptions from a calculation of both the value and the likelihood of possible outcomes He then demonstrates how theories in this vein have been historically at odds with empirical observations *Risk Taking* reports the results of an extensive survey of seven hundred managers that probed their attitudes and beliefs about risk and examined how they had actually made decisions in the face of uncertainty The picture that emerges is of a dynamic flexible process in which each manager's personal expertise and perceptions play profound roles Managerial strategies are continually modified to suit changing circumstances Rather than formulating probability estimates executives create potential scenarios based not only on the possible outcomes but also on the many arbitrary factors inherent in their own situations As Shapira notes risk taking propensities vary among managers and the need to maintain control and avoid particularly dangerous results exercises a powerful influence Shapira also examines the impact of organizational structure long term management objectives and

incentives on decision making With perceptive observations of the cognitive emotional and organizational dimensions of corporate decision making Risk Taking propels the study of managerial risk behavior into new directions This volume signals the way toward improving managerial decision making by revealing the need for more inclusive choice models that augment classical theory with vital behavioral observations

**Substantive Theory and Constructive Measures** Mark Stone, Jack Stenner, 2018-05-16 Stone and Stenner propose Substantive Theory and Constructive Measures as crucial elements in determining predictive measures and variance to advance causation in a specified frame of reference The collected chapters and supplementary measurement commentary provide the details to this approach Redundancy is purposeful in demonstrating the primacy of theory over data The collective process is contained in the measurement mechanism which embodies substantive theory constructed instrumentation and assembled data supporting spot on prediction or identifying error causal science
