**Daniel F McAuley**

## **Mathematics For Cancer Education:**

**Advancing Cancer Education and Healthy Living in Our Communities** Yuri Quintana, Aubrey Van Kirk Villalobos, Dorothy May, 2012 Over half the deaths from disease in the world are now due to just four chronic conditions: diabetes, lung diseases, some cancers, and heart disease. Health and education are inextricably linked. Developing and delivering effective, scalable, and sustainable education programs which lead to real behavioral change would influence some of the common risk factors for these diseases, such as smoking, poor diet, and lack of physical activity. This book contains the selected papers from the St. Jude Cure4Kids Global Summit held in June 2011 at St. Jude Children's Research Hospital in Memphis, Tennessee, USA. The aim of this three-day conference was to improve health and science education in classrooms and communities around the world. Leading educators, innovators, and pioneers in the field of public health came together in a multidisciplinary forum to explore examples of successful education programs, analyze the challenges in designing effective, scalable, and cost-efficient public health education programs, and identify strategies, methodologies, and incentives for developing future programs capable of yielding large-scale improvements in health outcomes for diverse communities. The papers presented here provide a foundation in the key topics necessary to create future innovative health promotion programs and will be of interest to all those whose work involves improving health outcomes by means of better and more effective health education.

*Mathematics as an Educational Task* Hans Freudenthal, 2012-12-06 Like preludes or prefaces are usually composed last. Putting them in the front of the book is a feeble reflection of what in the style of mathematics treatises and textbooks I usually call the didactical inversion: to be fit to print, the way to the result should be the inverse of the order in which it was found. In particular, the key definitions which were the finishing touch to the structure are put at the front. For many years I have contrasted the didactical inversion with the thought experiment. It is true that you should not communicate your mathematics to other people in the way it occurred to you, but rather as it could have occurred to you if you had known then what you know now, and as it would occur to the student if his learning process is being guided. This, in fact, is the gist of the lesson Socrates taught Meno's slave. The thought experiment tries to find out how a student could reinvent what he is expected to learn. I said about the preface that it is a feeble reflection of the didactical inversion. Indeed, it is not a constituent part of the book. It can even be torn out. Yet it is useful. Firstly to the reviewer who then need not read the whole work, and secondly to the author himself who, like the composer, gets an opportunity to review the leitmotifs of the book.

**Mathematical and Statistics Anxiety: Educational, Social, Developmental and Cognitive Perspectives** Kinga Morsanyi, Irene Cristina Mammarella, Denes Szűcs, Carlo Tomasetto, Caterina Primi, Erin Anne Maloney, 2017-01-19 Mathematical anxiety is a feeling of tension apprehension or fear which arises when a person is faced with mathematical content The negative consequences of mathematical anxiety are well documented Students with high levels of mathematical anxiety might underperform in important test situations they tend to hold negative attitudes towards mathematics and they are likely to opt out of elective mathematics courses which also affects their career opportunities Although at the university level many students do not continue to study mathematics social science students are confronted with the fact that their disciplines involve learning about statistics another potential source of anxiety for students who are uncomfortable with dealing with numerical content Research on mathematical anxiety is a truly interdisciplinary field with contributions from educational developmental cognitive social and neuroscience researchers The current collection of papers demonstrates the diversity of the field offering both new empirical contributions and reviews of existing studies The contributors also outline future directions for this line of research
