1. Relationship between a and the roots, y -intercept and gradient of the equation $y = ax^2 + bx + c$

1.1 Draw the following quadratic equations on the same system of axes.

1.1.1 $y = x^2 - 1$

1.1.2 $y = 2(x^2 - 1) = 2x^2 - 2$

1.1.3 $y = 3(x^2 - 1)$

1.1.4 $y = 0,5(x^2 - 1)$

1.2 Draw and solve the following quadratic equations on the same system of axes.

1.2.1 $y = x^2 + x - 6$

1.2.2 $y = 2(x^2 + x - 6) = 2x^2 + 2x - 12$

1.2.3 $y = 3(x^2 + x - 6)$

Niskanen,2013-06-05 This book considers Soft Computing methods and their applications in the human sciences Soft Computing methods including fuzzy systems neural networks evolutionary computing and probabilistic reasoning are state of the art methods in theory formation and model construction They mainly stem from the natural sciences and they have already proved to be powerful in their applications because Soft Computing models particularly fuzzy system models are simple and correspond well to the actual world and to human reasoning Hence we no longer have to use the complicated mathematical models that have prevailed in this research area Dozens of books and thousands of articles have been devoted

to applications of Soft Computing in the natural sciences but only a few studies have focused on its applications in the human sciences such as the social and the behavioral sciences this despite the fact that these novel methods seem to open a number of inspiring prospects in these disciplines In quantitative research in the human sciences typical application areas include statistical models that can be replaced by simpler numerical or linguistic Soft Computing models In qualitative research Soft Computing methods can enhance modelling because instead of having to do manual work we can use computer simulations with approximate and or linguistic constituents
