Introduction of Mathematics

In the book of 3G E-LEARNING (2018), most contemporary reference works define mathematics mainly by summarizing its main topics and methods:

- "The abstract science which investigates deductively the conclusions implicit in the elementary conceptions of spatial and numerical relations, and which includes as its main division's geometry, arithmetic, and algebra" - (Oxford English Dictionary, 1933)
- "The study of the measurement, properties, and relationships of quantities and sets, using numbers and symbols" - (American Heritage Dictionary, 2000)
- "The science of structure, order, and relation that has evolved from elemental practices of counting, measuring, and describing the shapes of objects"

Nocon & Nocon (2018) defined *Mathematics as the study of numbers and arithmetic operations*. It is also considered *an art that studies patterns for predictive purposes or specialized language which deals with form, size, and quantity*. (Nocon & Nocon, 2018, pp. 3)

Mathematics is the science that deals with the logic of shape, quantity, and arrangement. Math is all around us, in everything we do. It is the building block for everything in our daily lives, including mobile devices, architecture (ancient and modern), art, money, engineering, and even sports.¹

Nature of Mathematics

Based on the various definitions, the nature of mathematics can be listed as follows (3G E-LEARNING (2018):

- **An intellectual game** – Mathematics can be treated as an intellectual game with its own rules and without any relation to external criteria. From this viewpoint, mathematics is mainly a matter of puzzles, paradoxes, and problem solving – a sort of healthy mental exercise.
- **The art of drawing conclusions** – One of the important functions of the school is to familiarize children with a mode of thought which helps them in drawing right conclusions and inferences. According to J.W.A. Young a subject suitable for this purpose should have three characteristics:
 - That its conclusion is certain. At first, at least it is essential that the learner should know whether or not he has drawn the correct conclusion.
 - That it permits the learner to begin with simple and very easy conclusions to pass in well graded sequence to very difficult ones, as the earlier ones are mastered.
