

Maths Circus

The image is a colorful illustration for a 'Maths Circus'. At the top center, a white banner with a brown border contains the text 'Maths Circus' in a bold, yellow, rounded font. Below the banner, the scene is set against a light blue background with fine, radiating lines emanating from behind the banner. On either side of the banner, there is a unicycle with a pink frame and a black wheel. The background is decorated with several small, five-pointed stars in a light grey color. At the bottom of the image, two large, striped tents are visible. The tents have a red and dark blue/black striped pattern on the upper half and a red and white striped pattern on the lower half. The overall style is playful and cartoonish.

Spatial Sense Makes Math Sense Catheryne Draper, 2017-12-08. Spatial Sense Makes Math Sense: How Parents Can Help Their Children Learn Both brings the strengths of both algebra, arithmetic, and geometry into focus by showing how spatial relationships can make both make more sense. Parents will learn how to further develop and improve their child's spatial sense using visual spatial strategies of classifying, drawing diagrams, big idea concept building, visualizing, and more. As Sawyer encourages, "Even if the pictures are not good, the effort of making them will leave lasting traces in the mind and can cause the work to be remembered." Whether you had a preference for geometry and endured algebra, loved algebra and never understood geometry, or were one of those people who never recognized a purpose for any of the math topics or in truth in any mathematics, this book will show parents how developing spatial sense can help visually explain both algebra and geometry relationships. You will read about Sophie Germain, who believed that algebra and geometry worked hand in hand because, as she described them, algebra is written geometry and geometry is figured algebra.

[Where's the Wonder in Elementary Math?](#) Judith McVarish, 2012-08-21. This book argues that even in today's high-stakes testing environment, teaching to the test need not be teachers' only focus as they introduce young children to mathematics. Judith McVarish demonstrates how building a community of learners and using problem solving to engage students can help teachers encourage students' disposition to creative thinking and reasoning skills that can otherwise become lost due to the pressure of the many other expectations placed upon both teachers and students. This book offers strategies for infusing mathematics learning and reasoning into elementary school classrooms while meeting curriculum and testing mandates. The teacher-researcher component of each chapter provides a vehicle for teachers to bring their own expertise and questions back into the teaching and learning equation.
