**Improving Mathematics at Work** Celia Hoyles, Richard Noss, Phillip Kent, Arthur Bakker, 2010-04-30

Improving Mathematics at Work questions the mathematical knowledge and skills that matter in the twenty first century world of work and studies how the use of mathematics in the workplace is evolving in the rapidly changing context of new technologies and globalisation Through a series of case studies from the manufacturing and financial service sectors the authors argue that there has been a radical shift in the type mathematical skills required for work a shift not yet fully recognised by the formal education system or by employers and managers Examining how information technology has changed mathematical requirements the idea of Techno mathematical Literacies TmL is introduced to describe the emerging need to be fluent in the language of mathematical inputs and outputs to technologies and to interpret and communicate with these rather than merely to be procedurally competent with calculations The authors argue for careful analyses of workplace activities looking beyond the conventional thinking about numeracy which still dominates policy arguments about workplace mathematics Throughout their study the authors answer the following fundamental questions What mathematical knowledge and skills matter for the world of work today How does information technology change the necessary knowledge and the ways in which it is encountered How can we develop these essential new skills in the workforce With evidence of successful opportunities to learn with TmL that were co designed and evaluated with employers and employees this book provides suggestions for the development of TmL through the use of authentic learning activities and interactive software design Essential reading for trainers and managers in industry teachers researchers and lecturers of mathematics education and stakeholders implementing evidence based policy this book maps the fundamental changes taking place in workplace mathematics

on the stories and lessons learned from the San Francisco Unified School District educators who have talked the talk and walked the walk this book provides a model for all those involved in taking on detracking efforts from policymakers and school administrators to math coaches and teachers By sharing stories of real world examples lessons learned and prompts to provoke discussion about your own context the book walks you through Designing and gaining support for a policy of detracked math courses Implementing the policy through practical shifts in scheduling curriculum professional development and coaching Supporting and improving the policy through continuous research monitoring and maintenance This book offers the big ideas that help you in your own unique journey to advance equity in your school or district s mathematics education and also provides practical information to help students in a detracked system thrive

*Conceptual Change and the Philosophy of Science* David J. Stump, 2015-05-15 In this book David Stump traces alternative conceptions of the a priori in the philosophy of science and defends a unique position in the current debates over conceptual change and the constitutive elements in science Stump emphasizes the unique epistemological status of the constitutive elements of scientific theories constitutive elements being the necessary preconditions that must be assumed in order to conduct a particular scientific inquiry These constitutive elements such as logic mathematics and even some fundamental laws of nature were once taken to be a priori knowledge but can change thus leading to a dynamic or relative a priori Stump critically examines developments in thinking about constitutive elements in science as a priori knowledge from Kant s fixed and absolute a priori to Quine s holistic empiricism By examining the relationship between conceptual change and the epistemological status of constitutive elements in science Stump puts forward an argument that scientific revolutions can be explained and relativism can be avoided without resorting to universals or absolutes
