Mathematics, Its Content, Methods, and Meaning Matematicheskii institut im. V.A. Steklova, 1964 **Two-Dimensional Calculus** Robert Osserman, 2014-01-05 Two dimensional calculus is vital to the mastery of the broader field and this text presents an extensive treatment Advantages include the thorough integration of linear algebra and development of geometric intuition 1986 edition *Complex Analysis in Banach Spaces* Jorge Mujica, 2010-03-18 The development of complex analysis is based on issues related to holomorphic continuation and holomorphic approximation This volume presents a unified view of these topics in finite and infinite dimensions A high level tutorial in pure and applied mathematics its prerequisites include a familiarity with the basic properties of holomorphic functions the principles of Banach and Hilbert spaces and the theory of Lebesgue integration The four part treatment begins with an overview of the basic properties of holomorphic mappings and holomorphic domains in Banach spaces The second section explores differentiable mappings differentiable forms and polynomially convex compact sets in which the results are applied to the study of Banach and Frchet algebras Subsequent sections examine plurisubharmonic functions and pseudoconvex domains in Banach spaces along with Riemann domains and envelopes of holomorphy In addition to its value as a text for advanced graduate students of mathematics this volume also functions as a reference for researchers and professionals Encyclopaedia of Mathematics Michiel Hazewinkel, 2012-12-06 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions *Encyclopaedia of Mathematics* M. Hazewinkel, 2013-12-01

Ethnomathematics Arthur B. Powell, Marilyn Frankenstein, 1997-01-01 Presents the emerging field of ethnomathematics from a critical perspective challenging particular ways in which Eurocentrism permeates mathematics education and mathematics in general **Science Information News** ,1961 **Scientific Information Notes** ,1963 *Statistical Inference* Robert B. Ash, 2011-01-01 This book offers a brief course in statistical inference that requires only a basic

familiarity with probability and matrix and linear algebra Ninety problems with solutions make it an ideal choice for self study as well as a helpful review of a wide ranging topic with important uses to professionals in business government public administration and other fields 2011 edition *Linear Algebra* Georgi E. Shilov, 2012-04-26 Covers determinants linear spaces systems of linear equations linear functions of a vector argument coordinate transformations the canonical form of the matrix of a linear operator bilinear and quadratic forms and more **Calculus and Statistics** Michael C. Gemignani, 2014-06-10 Self contained and suitable for undergraduate students this text offers a working knowledge of calculus and statistics It assumes only a familiarity with basic analytic geometry presenting a coordinated study that develops the interrelationships between calculus probability and statistics Starting with the basic concepts of function and probability the text addresses some specific probabilities and proceeds to surveys of random variables and graphs the derivative applications of the derivative sequences and series and integration Additional topics include the integral and continuous variates some basic discrete distributions as well as other important distributions hypothesis testing functions of several variables and regression and correlation The text concludes with an appendix answers to selected exercises a general index and an index of symbols **Lectures on Analytic and Projective Geometry** Dirk J. Struik, 2014-03-05 This undergraduate text develops the geometry of plane and space leading up to conics and quadrics within the context of metrical affine and projective transformations 1953 edition *Introduction to Mathematical Fluid Dynamics* Richard E. Meyer, 2012-03-09 Excellent coverage of kinematics momentum principle Newtonian fluid rotating fluids compressibility and more Geared toward advanced undergraduate and graduate students of mathematics and science prerequisites include calculus and vector analysis 1971 edition **Hydrodynamic and Hydromagnetic Stability** S. Chandrasekhar, 2013-04-26 The Nobel Laureate s monumental study surveys hydrodynamic and hydromagnetic stability as a branch of experimental physics surveying thermal instability of a layer of fluid heated from below Benard problem more *Bulletin of the Atomic Scientists* , 1969-03 The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security Founded by Manhattan Project Scientists the Bulletin s iconic Doomsday Clock stimulates solutions for a safer world *Encyclopaedia of Mathematics (set)* Michiel Hazewinkel, 1994-02-28 The Encyclopaedia of Mathematics is the most up to date authoritative and comprehensive English language work of reference in mathematics which exists today With over 7 000 articles from A integral to Zygmund Class of Functions supplemented with a wealth of complementary information and an index volume providing thorough cross referencing of entries of related interest the Encyclopaedia of Mathematics offers an immediate source of reference to mathematical definitions concepts explanations surveys examples terminology and methods The depth and breadth of content and the straightforward careful presentation of the information with the emphasis on accessibility makes the Encyclopaedia of Mathematics an immensely useful tool for all mathematicians and other scientists who use or are confronted by mathematics in their work The Encyclopaedia of Mathematics provides without

doubt a reference source of mathematical knowledge which is unsurpassed in value and usefulness It can be highly recommended for use in libraries of universities research institutes colleges and even schools Soviet Mathematics - Doklady ,1964 Ordinary Differential Equations Morris Tenenbaum,Harry Pollard,1985-10-01 Skillfully organized introductory text examines origin of differential equations then defines basic terms and outlines the general solution of a differential equation Subsequent sections deal with integrating factors dilution and accretion problems linearization of first order systems Laplace Transforms Newton s Interpolation Formulas more Theory of Linear Operators in Hilbert Space N. I. Akhiezer,I. M.
