Nonlinear Programming Olvi L. Mangasarian, 1993-12-01
This reprint of the 1969 book of the same name is a concise rigorous yet accessible account of the fundamentals of constrained optimization theory Many problems arising in diverse fields such as machine learning medicine chemical engineering structural design and airline scheduling can be reduced to a constrained optimization problem This book provides readers with the fundamentals needed to study and solve such problems Beginning with a chapter on linear inequalities and theorems of the alternative basics of convex sets and separation theorems are then derived based on these theorems This is followed by a chapter on convex functions that includes theorems of the alternative for such functions These results are used in obtaining the saddlepoint optimality conditions of nonlinear programming without differentiability assumptions Properties of differentiable convex functions are derived and then used in two key chapters of the book one on optimality conditions for differentiable nonlinear programs and one on duality in nonlinear programming Generalizations of convex functions to pseudoconvex and quasiconvex functions are given and then used to

obtain generalized optimality conditions and duality results in the presence of nonlinear equality constraints The book has four useful self contained appendices on vectors and matrices topological properties of n dimensional real space continuity and minimization and differentiable functions

Nonlinear Programming 3 Olvi L. Mangasarian, Robert R. Meyer, Stephen M. Robinson, 2014-05-10. *Nonlinear Programming 3* covers the proceedings of the Special Interest Group on Mathematical Programming Symposium conducted by the Computer Sciences Department at the University of Wisconsin-Madison on July 11-13, 1977. This book is composed of 17 chapters. The first eight chapters describe some of the most effective methods available for solving linearly and nonlinearly constrained optimization problems. The subsequent chapter gives algorithms for the solution of nonlinear equations together with computational experience. Other chapters provide some applications of optimization in operations research and a measurement procedure for optimization algorithm efficiency. These topics are followed by discussion of the methods for solving large quadratic programs and algorithms for solving stationary and fixed point problems. The last chapters consider the minimization of certain types of nondifferentiable functions and a type of Newton method. This book will prove useful to mathematicians and computer scientists.

The meeting was attended by approximately 70 people from 18 countries. Besides the lectures, several formal and informal discussions took place. The result was a broad exposure providing a wide and deep understanding of the present research achievements in the field. We wish to express our appreciation for the active contributions of all the participants in the meeting. Our gratitude is due to the Ettore Majorana Center in Erice which offered its facilities and stimulating environment; its staff was certainly instrumental for the success of the meeting. Our gratitude is also due to Francisco Facchinei and Massimo Roma for the time spent in the organization of the workshop, and to Giuliana Cai for the careful typesetting of this volume.
