EXERCICE 1

(2 points)

Écris le numéro de chacune des propositions ci-dessous suivi de V si la proposition est vraie ou de F si elle est fausse.

1. Soit (Δ) une droite et \vec{u} un vecteur non nul. On note $S_{(\Delta)}$ la symétrie orthogonale d'axe (Δ) et $t_{\vec{u}}$ la translation de vecteur \vec{u} . Si \vec{u} est normal à (Δ) , alors la composée $S_{(\Delta)} \circ t_{\vec{u}}$ est une symétrie glissée.
2. Soit (X, Y) une série statistique à deux variables. Une équation de la droite de régression de X en Y par la méthode des moindres carrés est :

$$x = \frac{\text{cov}(X,Y)}{v(Y)} (y - \bar{Y}) + \bar{X}.$$

3. Toute similitude directe du plan de rapport 1 est une isométrie du plan.
4. La suite géométrique (u_n) définie sur \mathbb{N} par $u_n = -2 \left(\frac{2}{3}\right)^n$ est divergente.

Probability and Statistical Physics in Two and More Dimensions Clay Mathematics Institute. Summer School, 2012
This volume is a collection of lecture notes for six of the ten courses given in Buzios Brazil by prominent probabilists at the 2010 Clay Mathematics Institute Summer School Probability and Statistical Physics in Two and More Dimensions and at the XIV Brazilian School of Probability In the past ten to fifteen years various areas of probability theory related to statistical physics disordered systems and combinatorics have undergone intensive development A number of these developments deal with two dimensional random structures at their critical points and provide new tools and ways of coping with at least some of the limitations of Conformal Field Theory that had been so successfully developed in the theoretical physics community to understand phase transitions of two dimensional systems Included in this selection are detailed accounts of all three foundational courses presented at the Clay school Schramm Loewner Evolution and other Conformally Invariant Objects Noise Sensitivity and Percolation Scaling Limits of Random Trees and Planar Maps together with contributions on Fractal and Multifractal properties of SLE and Conformal Invariance of Lattice Models Finally the volume concludes with extended articles based on the courses on Random Polymers and Self Avoiding Walks given at the Brazilian School of Probability during the final week of the school Together these notes provide a panoramic state of the art view of probability theory areas related to statistical physics disordered systems and combinatorics Like the lectures themselves they are oriented towards advanced students and postdocs but experts should also find much of interest *Mathematical Masterpieces* Art Knoebel, Reinhard Laubenbacher, Jerry Lodder, David Pengelley, 2007-10-16 In introducing his essays on the study and understanding of nature and evolution biologist Stephen J Gould writes We acquire a surprising source of rich and apparently limitless novelty from the primary documents of great thinkers throughout our history But why should any nuggets or even akes be left for intellectual miners in such terrain Hasn't the Origin of Species been read untold millions of times Hasn't every paragraph been subjected to overt scholarly scrutiny and exegesis Letmeshareasecretrooted ingeneralhumanfoibles Very few people including authors willing to commit to paper ever really read primary sources certainly not in necessary depth and completion and often not at all I can attest that all major documents of science remain cho full of distinctive and illuminating novelty if only people will study them in full and in the original editions Why would anyone not yearn to read these works not hunger for the opportunity 99 p 6f It is in the spirit of Gould's insights on an approach to science based on primary texts that we offer the present book of annotated mathematical sources from which our undergraduate students have been learning for more than a decade Although teaching and learning with primary historical sources require a commitment of study the investment yields the rewards of a deeper understanding of the subject an appreciation of its details and a glimpse into the direction research has taken Our students read sequences of primary sources **Tools and Mathematics** John Monaghan, Luc Trouche, Jonathan M. Borwein, 2016-04-18 This book is an exploration of tools and mathematics and issues in

mathematics education related to tool use The book has five parts The first part reflects on doing a mathematical task with different tools followed by a mathematician's account of tool use in his work The second considers prehistory and history tools in the development from ape to human tools and mathematics in the ancient world tools for calculating and tools in mathematics instruction The third part opens with a broad review of technology and intellectual trends circa 1970 and continues with three case studies of approaches in mathematics education and the place of tools in these approaches The fourth part considers issues related to mathematics instructions curriculum assessment and policy the calculator debate mathematics in the real world and teachers use of technology The final part looks to the future task and tool design and new forms of activity via connectivity and computer games
