Remillard,Ok-Kyeong Kim,2020-03-16 The book presents comparative analyses of five elementary mathematics curriculum programs used in the U S from three different perspectives the mathematical emphasis the pedagogical approaches and how authors communicate with teachers These perspectives comprise a framework for examining what curriculum materials are comprised of what is involved in reading and interpreting them and how curriculum authors can and do support teachers in this process Although the focus of the analysis is 5 programs used at a particular point in time this framework extends beyond these specific programs and illuminates the complexity of curriculum materials and their role in teaching in general Our analysis of the mathematical emphasis considers how the mathematics content is presented in each program in terms of sequencing the nature of mathematical tasks cognitive demand and ongoing practice and the way representations are used Our analysis of the pedagogical approach examines explicit and implicit messages about how

students should interact with mathematics one another the teacher and the textbook around these mathematical ideas as well as the role of the teacher In order to examine how curriculum authors support teachers we analyze how they communicate with teachers and what they communicate about including the underlying mathematics noticing student thinking and rationale for design elements The volume includes a chapter on curriculum design decisions based on interviews with curriculum authors **Rediscovering Mathematics** Shai Simonson, 2011-04-14 A guide to effective mathematical education including a collection of topics and puzzles which aim to reignite interest in mathematics *New Mexico Mathematics Contest Problem Book* Liong-shin Hahn, 2005 The New Mexico Mathematics Contest for high school students has been held annually since 1966 Each November thousands of middle and high school students from all over New Mexico converge to battle with elementary but tricky math problems The 200 highest scoring students meet for the second round the following February at the University of New Mexico in Albuquerque where they listen to a prominent mathematician give a keynote lecture have lunch and then get down to round two an even more challenging set of mathematical mind twisters Liong shin Hahn was charged with the task of creating a new set of problems each year for the New Mexico Mathematics Contest 1990 1999 In this volume Hahn has collected the 138 best problems to appear in these contests over the last decades They range from the simple to the highly challenging none are trivial The solutions contain many clever analyses and often display uncommon ingenuity His questions are always interesting and relevant to teenage contestants Young people training for competitions will not only learn a great deal of useful mathematics from this book but and this is much more important they will take a step toward learning to love mathematics Scottish Secondary Mathematics , 2004
