Fourier Analysis and Imaging Ronald Bracewell, 2012-12-06 As Lord Kelvin said, Fourier's theorem is not only one of the most beautiful results of modern analysis but it may be said to furnish an indispensable instrument in the treatment of nearly every recondite question in modern physics. This has remained durable knowledge for a century and has extended its applicability to topics as diverse as medical imaging, CT scanning, the presentation of images on screens and their digital transmission, remote sensing, geophysical exploration and many branches of engineering. Fourier Analysis and Imaging is based on years of teaching a course on the Fourier Transform at the senior or early graduate level as well as on Prof. Bracewell's 1995 text **Two Dimensional Imaging**. It is an excellent textbook and will also be a welcome addition to the reference library of those many professionals whose daily activities involve Fourier analysis in its many guises.

Mathematical Morphology and Its Application to Signal and Image Processing Michael H. F. Wilkinson, Jos B.T.M. Roerdink, 2009-08-19 The 9th ISMM conference covered a very diverse collection of papers bound together by the central themes of mathematical morphology namely the treatment of images in terms of set and lattice theory Notwithstanding this central theme this ISMM showed increasing interaction with other fields of image and signal processing and several hybrid methods were presented which combine the strengths of traditional morphological methods with those of for example linear filtering This trend is particularly strong in the emerging field of adaptive morphological filtering where the local shape of structuring elements is determined by non morphological techniques This builds on previous developments of PDE based methods in morphology and amoebas In segmentation we see similar advancements in the development of morphological active contours Even within morphology itself diversification is great and many new areas of research are being opened up In particular morphology of graph based and complex based image representations are being explored Likewise in the well established area of connected filtering we find new theory and new algorithms but also expansion into the direction of hyperconnected filters New advances in morphological machine learning multi valued and fuzzy morphology are also presented Notwithstanding the often highly theoretical reputation of

mathematical morphology practitioners in this field have always had an eye for the practical
