Pathologies Of Belief:

Pathologies of Belief Max Coltheart, Martin Davies, 2000 Belief systems are supposed to be governed by norms of rationality Yet some people seem to believe quite extraordinary things for example that they are dead or that their closest relatives have been replaced by impostors or that the person they see in the mirror is not really them or that someone else's thoughts are being inserted into their mind Do people really believe such things Could beliefs like these simply be rational interpretations of unusual experiences Why are these beliefs maintained despite their utter implausibility and the uniform skepticism with which others greet them In this book psychologists and philosophers describe and discuss a range of case studies of delusional beliefs drawing out general lessons both for the cognitive architecture of the mind and for the notion of rationality and exploring connections between the delusional beliefs that occur in schizophrenia and the flawed understanding of beliefs that is characteristic of autism

Inference and Consciousness Timothy Chan, Anders Nes, 2019-12-11 Inference has long been a central concern in epistemology as an essential means by which we extend our knowledge and test our beliefs Inference is also a key notion in influential psychological accounts of mental capacities ranging from problem solving to perception Consciousness on the other hand has arguably been the defining interest of philosophy of mind over recent decades Comparatively little attention however has been devoted to the significance of consciousness for the proper understanding of the nature and role of inference It is commonly suggested that inference may be either conscious or

unconscious Yet how unified are these various supposed instances of inference Does either enjoy explanatory priority in relation to the other In what way or ways can an inference be conscious or fail to be conscious and how does this matter This book brings together original essays from established scholars and emerging theorists that showcase how several current debates in epistemology philosophy of psychology and philosophy of mind can benefit from more reflections on these and related questions about the significance of consciousness for inference

The Neural Basis of Human Belief Systems Frank Krueger, Jordan Grafman, 2012-08-21 Is the everyday understanding of belief susceptible to scientific investigation Belief is one of the most commonly used yet unexplained terms in neuroscience Beliefs can be seen as forms of mental representations and one of the building blocks of our conscious thoughts This book provides an interdisciplinary overview of what we currently know about the neural basis of human belief systems and how different belief systems are implemented in the human brain The chapters in this volume explain how the neural correlates of beliefs mediate a range of explicit and implicit behaviours ranging from moral decision making to the practice of religion Drawing inferences from philosophy psychology psychiatry religion and cognitive neuroscience the book has important implications for understanding how different belief systems are implemented in the human brain and outlines the directions which research on the cognitive neuroscience of beliefs should take in the future The Neural Basis of Human Belief Systems will be of great interest to researchers in the fields of psychology philosophy psychiatry and cognitive neuroscience

Aberrant Beliefs and Reasoning Niall Galbraith, 2014-09-11 An aberrant belief is extreme or unusual in nature In the most serious cases these beliefs cause emotional distress in those who hold them and typify the core symptoms of psychological disorders Each of the chapters in this volume seeks to examine the role that biases in reasoning can play in the formation of aberrant beliefs The chapters consider several conjectures about the role of reasoning in aberrant belief including the role of the jumping to conclusion bias in delusional beliefs the probabilistic bias in paranormal beliefs the role of danger confirming reasoning in phobias and the controversial notion that people with schizophrenia do not succumb to specific forms of reasoning bias There are also chapters evaluating different theoretical perspectives and suggestions for future research Aberrant Beliefs and Reasoning is the first volume presenting an overview of contemporary research in this growing subject area It will be essential reading for academics and students in the fields of human reasoning cognitive psychology and philosophy and will also be of great interest to clinicians and psychiatrists

The Psychology of Paranormal Belief Harvey J. Irwin, 2009 With a thorough and systematic review of investigations into the bases of belief in paranormal phenomena this discussion explores the four main theoretical approaches relating to the nature of such beliefs Objective and well researched this account addresses different points of view on the topic while some commentators depict paranormal believers as foolish others propose that paranormal beliefs must be understood as necessities that serve certain psychodynamic needs The foundations and shortcomings of each approach are also documented and a new comprehensive theory attempts to explain the development of scientifically
