Cyber attack methods are progressively modern and obstructing the attack is increasingly troublesome regardless of whether countermeasures are taken. The Dark Web especially presents challenges to information privacy and security due to anonymous behaviors and the unavailability of data. To better understand and prevent cyberattacks, it is vital to have a forecast of cyberattacks, proper safety measures, and viable use of cyber intelligence that empowers these activities. **Dark Web Pattern Recognition and Crime Analysis Using Machine Intelligence** discusses cyberattacks, security and safety measures to protect data, and presents the shortcomings faced by researchers and practitioners due to the unavailability of information about the Dark Web. Part 5 considers administrative crime analysis. Revised to reflect current research and methods, this third edition provides a new typology that categorizes crime analysis results by the type of problem examined, the purpose of the analysis, and the type of audience for which the results are produced. Also new are profiles of professionals. The text is illustrated with black and white and two color charts, maps, and aerial photos. The student website provides police reports, links to journal articles, and a link to ATAC software which allows students to conduct crime analysis themselves.
