Owen's Ape and Darwin's Bulldog Christopher E. Cosans, 2009-02-18 After Richard Owen criticized Darwin's *Origin* he was labeled a creationist by many and his work on ape anatomy was derided by Darwin's bulldog Thomas Huxley In this close analysis of Owen's texts Christopher E Cosans argues that Owen's thought was much more sophisticated than Huxley portrayed it In addition to considering Owen and Huxley's anatomical debate Owen's *Ape and Darwin's Bulldog* examines their philosophical dispute Huxley embraced the metaphysics of Descartes while Owen felt philosophy of science should rest on Kant's claim that sense perception does not tell us how things in themselves really are Owen thought the creationist Darwinist dispute was unproductive and held that both 19th century special creationists and Darwin's suggestion in the *Origin* that God created the first life forms unnecessarily brought supernatural causation into science With the hindsight of how the theory of evolution has progressed over the last three centuries the Owen Huxley debate affords the history and philosophy of science a case study It sheds light on theories of knowledge that have been advanced by Quine Wittgenstein Hanson and Putnam Owen's *Ape and Darwin's Bulldog* also examines Malthus Mill and Marx for the influence of economic thought on early evolutionary theories and considers broader ideas about how science and society interact

Why Youth is Not Wasted on the Young David F. Bjorklund, 2009-02-04 *Why Youth is Not Wasted on the Young* examines the nature of childhood through an evolutionary lens and argues that childhood is an essential stage of development with its own unique purposes separate from those of adulthood a time of growth and discovery that should not be rushed Written by a renowned developmental psychologist Examines the role that our period of immaturity plays on the

social emotional and educational needs of today's children Challenges common perceptions of children as simply adults in training

Prehistoric Humans in Film and Television Michael Klossner, 2015-01-09 From the early days of the movies cavemen have been a popular subject for filmmakers not surprisingly since the birth of cinema occurred only a few decades after the earliest scientific studies of prehistoric man Filmmakers however were not constrained by the emerging science instead they most often took a comedic look at prehistory a trend that continued throughout the 20th century Prehistoric humans also populated adventure fantasy films with the original One Million B.C. 1940 leading the charge Documentaries were also made but it was not until the 1970s that accurate film accounts of prehistoric humans finally emerged This exhaustive work provides detailed accounts of 581 film and television productions that feature depictions of human prehistory Included are dramas and comedies set in human prehistory documentaries and films and television shows in which prehistoric people somehow exist in historical periods from the advent of civilization up to the present or in extraterrestrial settings Each entry includes full filmographic data including year of release running time production personnel cast information and format A description of each film provides background on the prehistoric elements Contemporary critical commentary is included for many of the works

[On the Origin of Species by Natural Selection](#) Jonathan H. Turner, Alexandra Maryanski, 2015-11-17 Kinship religion and economy were not natural to humans nor to species of apes that had to survive on the African savanna Society from its very beginnings involved an uneasy necessity that often stood in conflict with humans ape ancestry these tensions only grew along with later more complex eventually colossal

sociocultural systems The ape in us was not extinguished nor obviated by culture indeed our ancestry continues to place pressures on individuals and their sociocultural creations Not just an exercise in history this pathbreaking book dispels many myths about the beginning of society to gain new understandings of the many pressures on societies today *Encyclopedia of Evolution* Stanley A. Rice, 2009 Evolutionary science is not only one of the greatest breakthroughs of modern science but also one of the most controversial Perhaps more than any other scientific area evolutionary science has caused us all to question what we are where we came from and how we relate to the rest of the universe *Encyclopedia of Evolution* contains more than 200 entries that span modern evolutionary science and the history of its development This comprehensive volume clarifies many common misconceptions about evolution For example many people have grown up being told that the fossil record does not demonstrate an evolutionary pattern and that there are many missing links In fact most of these missing links have been found and their modern representatives are often still alive today The biographical entries represent evolutionary scientists within the United States who have had and continue to have a major impact on the broad outline of evolutionary science The biographies chosen reflect the viewpoints of scientists working within the United States Five essays that explore interesting questions resulting from studies in evolutionary science are included as well The appendix consists of a summary of Charles Darwin's *Origin of Species* which is widely considered to be the foundational work of evolutionary science and one of the most important books in human history The five essays include How much do genes control human behavior What are the ghosts of evolution Can an evolutionary scientist be religious Why do humans die Are humans alone in the universe *Human Biodiversity* Jonathan M. Marks, 2001 Are humans unique This simple question at the very heart of the hybrid field of biological anthropology poses one of the false dichotomies with a stereotypical humanist answering in the affirmative and a stereotypical scientist answering in the negative The study of human biology is different from the study of the biology of other species In the simplest terms people's lives and welfare may depend upon it in a sense that they may not depend on the study of other scientific subjects Where science is used to validate ideas four out of five scientists preferring a brand of cigarettes or toothpaste there is a tendency to accept the judgment as authoritative without asking the kinds of questions we might ask of other citizens' pronouncements In *Human Biodiversity* Marks has attempted to distill from a centuries long debate what has been learned and remains to be learned about the biological differences within and among human groups His is the first such attempt by an anthropologist in years for genetics has undermined the fundamental assumptions of racial taxonomy The history of those assumptions from Linnaeus to the recent past the history of other more useful assumptions that derive from Buffon and have reemerged to account for genetic variation are the poles of Marks's exploration **The Evolutionary Emergence of Language** Chris Knight, Michael Studdert-Kennedy, James Hurford, 2000-11-20 Language has no counterpart in the animal world Unique to *Homo sapiens* it appears inseparable from human nature But how when and why did it emerge The contributors to this volume linguists anthropologists cognitive

scientists and others adopt a modern Darwinian perspective which offers a bold synthesis of the human and natural sciences As a feature of human social intelligence language evolution is driven by biologically anomalous levels of social cooperation Phonetic competence correspondingly reflects social pressures for vocal imitation learning and other forms of social transmission Distinctively human social and cultural strategies gave rise to the complex syntactical structure of speech This book presenting language as a remarkable social adaptation testifies to the growing influence of evolutionary thinking in contemporary linguistics It will be welcomed by all those interested in human evolution evolutionary psychology linguistic anthropology and general linguistics

The World and the Word: Making Sense of Social Science in an Age of Conflict, Opposition, and Grace Dr. Herbert L. Green Jr., 2017-08-24 Jesus very presence as the New Testament age unfolded 1st century A D engendered opposition created conflict while ushering in grace His ideas were considered radical Why is this so The NIV Archeological Study Bible 2005 NIV Student Bible et al and corroborating Extra Biblical evidence provide a context for the Word view about Jesus in Biblical history and supports aspects of the social and physical sciences in terms of cultural socio economic political historical archeological and philosophical apologetics evidence As the pages of this book unfold there is an internal consistency with social science and The Bible However where such consistency appeared to diverge this author attempts to filter out the noise by applying critical thinking criteria to a Worldview that may not be consistent with the Word view The goal of this book therefore is to provide some exposition Greek apologia of the Word and see how the World fits Born again Christians can be credible scientists and not compromise Gods Word After thoughtful reading please send reflective comments to Dr Herb Green Jr at docgreen48 outlook com

Lines of Evidence: How Recent Science Infers the Existence of God Rick Jory, 2023-08-18 Secular science demands we accept the philosophical dogma of scientific materialism that only material entities exist Yet recent science has discovered the immaterial Also mandated is the assumption that all things must be explained by natural causes But we now are certain that the universe had a beginning There was a time when nature didn't exist and yet we must attribute the origin of the universe to nature And what about Darwin's theory of evolution taken as fact that every plant and animal owe its origin to a common ancestor and naturalistic causes At the time of Darwin over a century and a half ago no one knew the true complexity of the cell We now know the simplest of living organisms has 159 662 base pairs of DNA and 182 protein coding genes What naturalistic cause put all of this together Could this be assembled by blind purposeless accident What does recent science have to say And what about recent discoveries in origin of life research Do we now know enough to suggest life could not have created itself A lot is happening in today's science that is best explained through the Christian worldview Let's see what some of today's scientists are now saying
