**Abstract.** Turkey, which meets nearly 70 per cent of its energy demands with import, is facing the problems of energy security and current account deficit as a result of its dependence on foreign sources in terms of energy input. It is also known that Turkey is having environmental problems due to the increases in CO<sub>2</sub> emission. Considering these problems in Turkish economy, where energy input is commonly used, it is necessary to use energy sources efficiently and provide alternative energy sources. Due to the dependency of renewable sources on meteorological conditions (the absence of enough sun, wind, and water sources), the energy generation could not be provided efficiently and permanently from these sources. At this point, nuclear energy as an alternative energy source maintains its importance as a sustainable energy source that providing energy in 7 days and 24 hours. The main purpose of this study is to evaluate the nuclear energy subject within the context of negative public perceptions emerged after Chernobyl (1986) and Fukushima (2011) disasters and to investigate in the economic framework.

## 1 Introduction

Quest created by the growing need for sustainable energy in Turkey has started to highlight the various renewable energy needs. This creates the need for nuclear energy of the first actors to trigger the global and technological development as well as establishing and operating direction of the well has now started to be observed to make a functional form that can spread the form of energy production. Nuclear power plants and power centers of the energy system could be used in our country to build off of existing nuclear power plants is clear that the most rational approach is no longer a hidden fact. Brought to life within the context of this reality constitutes the main subject of the Energy Policy and Public Perception survey creation in Turkey.

As an alternative solution that can contribute to the current electricity generation of Turkey's energy needs, the basic aim of the research on nuclear energy in which there is a positive example on the world economic paradigm, social and political returns to be created in the public perception of environmentally compatible systems in nuclear power consumption reveal positive and negative and made public which is to contribute to the reduction of false cause of uncertain thoughts. With this conceptual idea of the benefits of nuclear power use is not only about the national doubts but also with their expectations and perceptions.

Globalization in the area where the production of energy spending and economic competition with countries has been diligently calculated deficits and dependencies. It is able to show growth without getting stuck on the negative perception of Turkey will provide the benefits of nuclear energy policy? In this research, descriptive and explanatory methods were used to put forward the findings identified in this line of thinking.

This paper is organized as follows. Section 2 gives an overview about the role and importance of nuclear power plants in the world. Section 3 presents the energy problematical and nuclear energy policies in Turkey. The public perception of nuclear energy in Turkey has been evaluated in the section 4. Conclusions and discussions have been given in the section 5.

## 2 The role and importance of nuclear power in the World

After the first use of nuclear energy for electricity production in the US, it began to be used in electricity production by England in 1953, by Russia in 1954, by France 1956 and by Germany in 1961. 10 countries in the 1960's and subsequently 10 countries more in 1970's began producing electricity based on nuclear technology. The oil crisis of the early 1970's has increased the demand
