Nuclear Decommissioning Waste Management And Environmental Site Remediation:

Nuclear Decommissioning, Waste Management, and Environmental Site Remediation Colin Bayliss, Kevin Langley, 2003-10-10 Decommissioning nuclear facilities is a relatively new field which has developed rapidly in the last ten years. It involves materials that may be highly radioactive and therefore require sophisticated methods of containment and remote handling. The wastes arising from decommissioning are hazardous and have to be stored or disposed of safely in order to protect the environment and future generations. Nuclear decommissioning work must be carried out to the highest possible standards to protect workers, the general public, and the environment. This book describes the techniques used for dismantling redundant nuclear facilities, the safe storage of radioactive wastes, and the restoration of nuclear licensed sites. Describes the techniques used for dismantling nuclear facilities, safe storage of radioactive wastes, and the restoration of nuclear licensed facilities. Provides the reader with decommissioning experience accumulated over 15 years by UKAEA. Contains valuable information to personnel new to decommissioning and waste management. Nuclear Decommissioning Michele Laraia, 2012-02-21 Once a nuclear installation has reached the end of its safe and economical operational lifetime, the need for its decommissioning arises. Different strategies can be employed for nuclear decommissioning based on the evaluation of particular hazards and their attendant risks, as well as on the analysis of costs of clean up and waste management. This allows for decommissioning either soon after permanent shutdown or perhaps a long time later, the latter course allowing for radioactivity levels to drop in any activated or contaminated components. It is crucial for clear processes and best practices to be applied in decommissioning such installations and sites, particularly where any significant health and environmental risks exist. This book critically reviews the nuclear decommissioning processes and technologies applicable to nuclear power plants and other civilian nuclear facilities. Part one focuses on the fundamental planning issues in starting a nuclear decommissioning process, from principles and safety regulations to financing and project management. Part two covers the execution phase of nuclear decommissioning projects, detailing processes and technologies such as dismantling, decontamination, and radioactive waste management, as well as environmental remediation, site clearance, and reuse. Finally, part three details international experience in the decommissioning of nuclear applications, including the main nuclear reactor types and nuclear fuel cycle facilities, as well as small nuclear facilities and legacy nuclear waste sites. Critically reviews nuclear decommissioning processes and technologies applicable to nuclear power plants and other civilian nuclear facilities. Discusses the fundamental planning issues in starting a nuclear decommissioning process. Considers the execution phase of nuclear decommissioning projects, including dismantling, decontamination, and radioactive waste management, as well as environmental remediation, site clearance, and reuse. Radioactive Waste Management and Contaminated Site Clean-Up William E Lee, Michael I. Ojovan, Carol M Jantzen, 2013-10-31 Radioactive waste management and contaminated site clean up reviews radioactive waste management processes, technologies, and international experiences. Disarmament and Decommissioning in the Nuclear Domain Jean-Claude Amiard, 2021-09-15 Following the acquisition of the atomic bomb by five states the United Nations began drafting several treaties to limit nuclear proliferation These efforts failed as four more states also acquired nuclear weapons In a similar vein an attempt to limit atomic weapons primarily within the two superpowers was initiated

While the number of weapons has decreased the new bombs now being manufactured are more powerful and more precise negating any reduction in numbers In the field of civil nuclear use all nuclear facilities reactors factories etc have a limited lifespan Once a plant is permanently shut down these facilities must be decommissioned and dismantled These operations are difficult time consuming and costly In addition decommissioning generates large volumes of radioactive waste of various categories including long lived and high activity waste Risks to the environment and to health are not negligible during decommissioning The International Atomic Energy Agency IAEA and the Nuclear Energy Agency NEA of the Organisation for Economic Co operation and Development OECD have produced numerous publications with recommendations Each state has its own decommissioning strategy immediate or delayed and final plan for the site whether it be returning it to greenfield status or obtaining a nuclear site license with centuries long monitoring
