Nuclear Physics Energy And Matter Special Student Edition:

Nuclear Physics John Michael Pearson, 1986 An introductory nuclear physics text with a difference Aimed primarily at final year undergraduates it covers the range of material usually found in texts at this level However it also recognises that most of these students are unlikely to go on to specialise and hence unlikely to appreciate the linkage between nuclear physics and other subjects Emphasis is therefore placed on macroscopic features of the subject matter such as astrophysics and reactor theory

Département de physique, 1983 *Special Relativity, Tensors, And Energy Tensor: With Worked Problems* Somnath Datta, 2021-03-02 This book takes the reader from the preliminary ideas of the Special Theory of Relativity STR to the doorsteps of the General Theory of Relativity GTR The first part explains the main concepts in a layman s language including STR the Lorentz transformation relativistic mechanics Thereafter the concept of tensors is built up in detail especially Maxwell s stress tensor with illustrative examples culminating in the energy momentum conservation in electromagnetic fields Mathematical structure of Minkowski s space time is constructed and explained graphically The equation of motion is formulated and then illustrated by the example of relativistic rocket The principle of covariance is explained with the covariant equations of classical electrodynamics Finally the book constructs the energy tensor which constitutes the source term in Einstein s field equation which clears the passage to the GTR In the book the concepts of tensors are developed carefully and a large number of numerical examples taken from atomic and nuclear physics The graphs of important equations are included This is suitable for studies in classical electrodynamics modern physics and relativity
