Manuscript Cultures: Mapping the Field Jörg Quenzer, Dmitry Bondarev, Jan-Ulrich Sobisch, 2014-12-12 Script and writing were among the most important inventions in human history and until the invention of printing the handwritten book was the primary medium of literary and cultural transmission Although the study of manuscripts is already quite advanced for many regions of the world no unified discipline of manuscript studies has yet evolved which is capable of treating handwritten books from East Asia India and the Islamic world equally alongside the European manuscript tradition This book which aims to begin the interdisciplinary dialogue needed to arrive at a truly systematic and comparative approach to manuscript cultures worldwide brings together papers by leading researchers concerned with material philological and cultural aspects of different manuscript traditions

Raman Spectroscopy in Cultural Heritage Preservation Howell G. M. Edwards, Peter Vandenabeele, Philippe Colomban, 2022-10-13 This book addresses the application of Raman spectroscopic techniques to a range of diverse problems which arise in the study conservation and restoration of artefacts and sites closely related to our cultural heritage as well as in authentication These themes are naturally wider than what at first might be considered as artworks and archaeological artefacts and the topics include pigments paintings ceramics glass sculpture and patination corrosion textiles industrial archaeology the degradation and preservation of biomaterials mummies and human skeletal remains An interesting feature is the inclusion of modern case studies which describe specific problems and approaches to

the Raman spectral analysis of items important to our cultural heritage The text is prefaced with an introduction to the important parameters used in nondestructive Raman measurements and also highlights some future applications based upon novel miniaturised instrumentation for in field studies and potential screening work which will identify specimens which would repay further studies in the laboratory An attempt is made to give a snapshot of the state of the art evolution since the beginning of the technique 1970s and to point out potential further development The book is co edited by three international experts with many years experience in the application of Raman spectroscopy to artworks archaeological artefacts and in the investigation of materials and sites for cultural heritage preservation and each editor has undertaken to write individual chapters and different topics personally The adopted approach is designed to convey the sort of information which has become available from the adoption of analytical Raman spectroscopy to different problems in the field of cultural heritage preservation through the spectral interrogation of artefacts and how the interpretation of the spectral data can assist museum curators archaeologists and cultural heritage historians in the preservation and conservation of ancient materials and sites a particular advantage in this respect is the ability of Raman spectroscopy to determine generally in a strictly noninvasive procedure at the laboratory or on site with mobile instruments the presence of both organic and inorganic components in a particular specimen together nondestructively without any chemical and mechanical pretreatment being undertaken which is an essential requirement for rare and valuable samples An important aside from this work is the means of spectral identification of ongoing biodeterioration and biological colonisation in specimens in storage and the effects of environmental deterioration such as humidity and temperature upon their integrity Manuscripts of the Greek Bible Bruce M. Metzger, 1981-09-17 After a thorough survey of the fundamentals of Greek palaeography the author discusses many of the distinctive features of biblical manuscripts such as musical neumes lectionaries glosses commentaries and illuminations

Samaritan Scribes and Manuscripts Alan David Crown, 2001 This book aims to provide the critical tools to help scholars in their use of Samaritan manuscripts The basic codicological tools is a series of complementary data bases compiled from typological studies of the physical properties of manuscripts Each typology is in effect a diachronic profile created by painstaking comparison and analysis of the physical properties of manuscripts of known provenance and or date Using these typologies or diachronic profiles it is possible to evaluate the chronology of the physical characteristics of any manuscript the quire or gathering structure ink ruling spacing of the text on the folio sewing of the sections Naturally the more information available about the physical properties of any manuscript the better the chance of making correlations between the typologies of different properties The basic rule in palaeography and codicology is that the researcher works on an inductive basis from as wide a sample as possible of dated manuscripts It is hoped that in the studies in this volume evidence has been provided which will serve as a guide both to the appearance and the nature of Samaritan manuscripts and to the evaluative process that one would employ in examining them for codicological purposes The reader should be able to apply the criteria provided here to the evaluation of whatever data can be retrieved from any undated Samaritan manuscripts with which he is confronted Alan D Crown in the preface
