Mapping Wildfire Hazards And Risks:

Mapping Wildfire Hazards and Risks R Neil Sampson, R. Dwight Atkinson, Joe W. Lewis, 2000-10-10 Develop accurate computer models to determine wildfire risks and controlled burn benefits Although scientists now recognize that fire is essential to many ecosystems the ecological and political issues of managing wildfire continue to be vexing Mapping Wildfire Hazards and Risks offers multiple perspectives on using a Geographic Information System GIS for more effective wildfire management This innovative technology is the ideal tool to organize and display all the information available so authorities can make informed judgments based on all the facts Because the authors are not merely theorizing but discussing the GIS they are actually building and using Mapping Wildfire Hazards and Risks offers practical ideas and perspectives including specific information on the modeling approach and kinds of data utilized valuable discussions of the social and environmental factors included in the model techniques for predicting the effects of wildfire on neighborhoods soil erosion sedimentation and air quality predictions of long term ecosystem recovery given wildfires of different sizes and intensities maps charts tables and formulas to make the process of building a GIS understandable and accessible Mapping Wildfire Hazards and Risks is a compilation of the ideas of federal and state agencies universities and non governmental organizations on how to rank and prioritize forested watershed areas that are in need of prescribed fire This book provides the essential information for deciding how to set priorities for wildfire management that might reduce risks or lower future damages *Wildfire Risk* Wade E. Professor Martin, Carol Professor Raish, Brian Professor Kent, 2010-09-30 The continuing encroachment of human settlements into fire prone areas and extreme fire seasons in recent years make it urgent that we better understand both the physical and human dimensions of managing the risk from wildfire Wildfire Risk follows from our awareness that increasing public knowledge about wildfire hazard does not necessarily lead to appropriate risk reduction behavior Drawing heavily upon health and risk communication and risk modeling the authors advance our understanding of how individuals and communities respond to wildfire hazard They present results of original research on the social economic and psychological factors in responses to risk discuss how outreach and education can influence behavior and consider differences among ethnic racial groups and between genders with regard to values views and attitudes about wildfire risk They explore the role of public participation in risk assessment and mitigation as well as in planning for evacuation and recovery after fire Wildfire Risk concludes with a dedicated section on risk modeling with perspectives from decision sciences geography operations research psychology experimental economics and other social sciences Environmental Services of Agroforestry Systems Yale University, Florencia Montagnini, 2024-11-01 Get cutting edge agroforestry research and data Deforestation and the rampant use of fossil fuels are major contributors to increases in atmospheric carbon dioxide and are enormous influences on global warming Agroforestry systems and tree plantations can help mitigate the resulting climate change and degradation of biodiversity and accelerating climate change Environmental Services of Agroforestry Systems addresses these global

concerns with an essential collection of presentations on biodiversity and climate change from the First World Congress in Agroforestry Orlando Florida 2004 Respected experts discuss the latest research and data on how agroforestry systems can help solve environmental problems through carbon sequestration and biodiversity conservation Years ago agroforestry s environmental benefits were mainly seen as being soil amelioration erosion control microclimate control and the alleviation of the effects of drought in semiarid areas Environmental Services of Agroforestry Systems goes beyond the regional considerations of years past to focus on the challenges of today s most pressing global environmental concerns The contributors describe the latest research and concepts in agroforestry systems reforestation efforts soils vegetation and agriculture while reviewing their economic aspects Incentives for reforestation and agroforestry are explored in detail Each chapter is carefully referenced and includes tables to clarify ideas and data Environmental Services of Agroforestry Systems addresses advantages of mixed species plantations tropical pasture and silvo pastoral systems tropical forest ecosystem management research on the economic feasibility of various land use systems socio economic considerations of coffee growing ecosystems agroforestry systems in Costa Rica Environmental Services of Agroforestry Systems is essential reading for researchers and scientists as well as professionals in agroforestry forestry global change climate change and environmental studies educators and graduate and undergraduate students

Transboundary Protected Areas Yale University, 2003-05-21 Top researchers share their expertise on conservation and sustainability in areas that extend across national borders This informative and insightful book examines strategies being used by governments and NGOs to protect wild areas that cross national borders and cultural linguistic and socioeconomic boundaries In addition to presenting case studies from five continents Transboundary Protected Areas The Viability of Regional Conservation Strategies provides several theoretical overviews that suggest viable approaches to conserving biodiversity in these difficult to protect areas From the editors Historically the borders of protected areas have been defined by convenient social political or proprietary boundaries rather than by ecological boundaries Today many scientists and practitioners are in agreement that the world s biodiversity and other natural resources can best be conserved on an ecosystem or regional scale which may or may not be consistent with political boundaries Efforts to protect land on an ecosystem scale have led to the creation of numerous transboundary protected areas also referred to as international peace parks or transfrontier conservation areas These areas which often cross linguistic socioeconomic and cultural boundaries as well as national borders represent regional conservation at its most complex While many scientists and practitioners promote eco regional approaches to conservation many also advocate pursuing conservation goals on local or community scales Conservationists therefore endeavor to achieve a seemingly incongruous mandate to pursue top down regional goals using bottom up local approaches Transboundary Protected Areas The Viability of Regional Conservation Strategies addresses the vital questions associated with this mandate Is it reasonable and realistic to approach regional conservation this way What strategies have been employed to achieve

these goals and how successful have they been Who benefits from transboundary conservation and what are the costs Reflecting the information delivered at the 2001 conference of the Yale chapter of the International Society of Tropical Foresters ISTF this book provides you with the best answers available at this time The contributors include social and natural scientists resource managers policymakers and community leaders Transboundary Protected Areas The Viability of Regional Conservation Strategies brings them together for an interdisciplinary exploration of these questions and other critical issues related to conservation in and around transboundary protected areas Specific cases that are thoughtfully examined in Transboundary Protected Areas The Viability of Regional Conservation Strategies include the public reaction to the Yellowstone to Yukon Y2Y Conservation Initiative the ways in which the establishment of southern Africa s existing and proposed Transfrontier Conservation Areas TFCAs can help conserve biodiversity aid socioeconomic development and promote international peace development and conservation efforts in the Maloti Drakensberg mountains of southern Africa which straddle the borderlands between South Africa and Lesotho the cultural aspects of protected area management in Venezuela and Guyana the impact of transfrontier collaboration as evidenced by the International Gorilla Conservation Programme IGCP in the Virunga Bwindi region of Africa Uganda Rwanda and the Democratic Republic of Congo how the Nepalese have addressed the problems of poaching commercial logging illegal harvesting and smuggling of forest products and illegal trade of wildlife and wildlife products in the eastern Himalayas by implementing a transboundary biodiversity conservation initiative Helpful maps tables and figures make geographical regions and conservation information easy to assimilate

Wildland Fire Danger Estimation and Mapping Emilio Chuvieco, 2003 The book presents a wide range of techniques for extracting information from satellite remote sensing images in forest fire danger assessment It covers the main concepts involved in fire danger rating and analyses the inputs derived from remotely sensed data for mapping fire danger at both the local and global scale The questions addressed concern the estimation of fuel moisture content the description of fuel structural properties the estimation of meteorological danger indices the analysis of human factors associated with fire ignition and the integration of different risk factors in a geographic information system for fire danger management

Environmental Hazards Methodologies for Risk Assessment and Management Nicolas R. Dalezios, 2017-02-15 From the beginning of 21st century there has been an awareness of risk in the environment along with a growing concern for the continuing potential damage caused by hazards In order to ensure environmental sustainability a better understanding of natural disasters and their impacts is essential It has been recognized that a holistic and integrated approach to environmental hazards needs to be attempted using common methodologies such as risk analysis which involves risk management and risk assessment Indeed risk management means reducing the threats posed by known hazards whereas at the same time accepting unmanageable risks and maximizing any related benefits The risk management framework involves evaluating the importance of a risk either quantitatively or qualitatively Risk assessment comprises three steps

namely risk identification data base event monitoring statistical inference risk estimation magnitude frequency economic costs and risk evaluation cost benefit analysis Nevertheless the risk management framework also includes a fourth step risk governance i e the need for a feedback of all the risk assessment undertakings There is currently a lack of such feedback which constitutes a serious deficiency in the reduction of environmental hazards This book emphasises methodological approaches and procedures of the three main components in the study of environmental hazards namely forecasting nowcasting before monitoring during and assessment after based on geoinformatic technologies and data and simulation through examples and case studies These are considered within the risk management framework and in particular within the three components of risk assessment namely risk identification risk estimation and risk evaluation This approach is a contemporary and innovative procedure and constitutes current research in the field of environmental hazards

Environmental Hazards Methodologies for Risk Assessment and Management covers hydrological hazards floods droughts storms hail desertification biophysical hazards frost heat waves epidemics forest fires geological hazards landslides snow avalanches tectonic hazards earthquakes volcanoes and technological hazards This book provides a text and a resource on environmental hazards for senior undergraduate students graduate students on all courses related to environmental hazards and risk assessment and management It is a valuable handbook for researchers and professionals of environmental science environmental economics and management and engineering Editor Nicolas R Dalezios University of Thessaly Greece

The wildfire risk management in buildings Miguel Almeida, Although investments in wildfire management are generally increasing large and more intense wildfires are occurring more frequently Consequently the impact caused on infrastructures located in fire risk areas has led to dramatic situations involving the destruction of assets with great economic and social value and in extreme cases the loss of human lives The aim of this book is to share technical and scientific knowledge on the most appropriate way to manage the wildfire risk in buildings considering three essential components the building its surroundings and self protection systems in association with the current legislation and the policies followed in Portugal on this theme The book s content may be of interest to technical and non technical staff dealing with wildland urban interface fires as well as to society in general especially to citizens who own buildings located in areas susceptible to wildfires
