Mathematical Logic And Foundations Of Set Theory:

Foundations of Set Theory A.A. Fraenkel,Y. Bar-Hillel,A. Levy,1973-12-01 Foundations of Set Theory discusses the reconstruction undergone by set theory in the hands of Brouwer Russell and Zermelo Only in the axiomatic foundations however have there been such extensive almost revolutionary developments This book tries to avoid a detailed discussion of those topics which would have required heavy technical machinery while describing the major results obtained in their treatment if these results could be stated in relatively non technical terms This book comprises five chapters and begins with a discussion of the antinomies that led to the reconstruction of set theory as it was known before It then moves to the axiomatic foundations of set theory including a discussion of the basic notions of equality and extensionality and axioms of comprehension and infinity The next chapters discuss type theoretical approaches including the ideal calculus the theory of types and Quine s mathematical logic and new foundations intuitionistic conceptions of mathematics and its constructive character and metamathematical and semantical approaches such as the Hilbert program This book will be of interest to mathematicians logicians and statisticians SET THEORY AND FOUNDATIONS OF MATHEMATICS DOUGLAS. Mathematical Logic and Foundations of Set Theory Yehoshua Bar-Hillel,1970 Mathematical Logic and Foundations of Set Theory Yehoshua Bar-Hillel,1970 The Foundations of Mathematics Kenneth Kunen,2009 Mathematical logic grew out of philosophical questions regarding the foundations of mathematics but logic has now outgrown its philosophical roots and has become an integral part of mathematics in general This book is designed for students who plan to specialize in logic as well as for those who are interested in the applications of logic to other areas of mathematics Used as a text it could form the basis of a beginning graduate level course There are three main chapters Set Theory Model Theory and Recursion Theory The Set Theory chapter describes the set theoretic foundations of all of mathematics based on the ZFC axioms It also covers technical results about the Axiom of Choice well orderings and the theory of uncountable cardinals The Model Theory chapter discusses predicate logic and formal proofs and covers the Completeness Compactness and Lowenheim Skolem Theorems elementary submodels model completeness and applications to algebra This chapter also

continues the foundational issues begun in the set theory chapter Mathematics can now be viewed as formal proofs from ZFC Also model theory leads to models of set theory This includes a discussion of absoluteness and an analysis of models such as H and R The Recursion Theory chapter develops some basic facts about computable functions and uses them to prove a number of results of foundational importance in particular Church's theorem on the undecidability of logical consequence the incompleteness theorems of Gödel and Tarski's theorem on the non definability of truth

A First Course in Mathematical Logic and Set Theory Michael L. O'Leary,2015-09-08 A mathematical introduction to the theory and applications of logic and set theory with an emphasis on writing proofs Highlighting the applications and notations of basic mathematical concepts within the framework of logic and set theory A First Course in Mathematical Logic and Set Theory introduces how logic is used to prepare and structure proofs and solve more complex problems The book begins with propositional logic including two column proofs and truth table applications followed by first order logic which provides the structure for writing mathematical proofs Set theory is then introduced and serves as the basis for defining relations functions numbers mathematical induction ordinals and cardinals The book concludes with a primer on basic model theory with applications to abstract algebra A First Course in Mathematical Logic and Set Theory also includes Section exercises designed to show the interactions between topics and reinforce the presented ideas and concepts Numerous examples that illustrate theorems and employ basic concepts such as Euclid's lemma the Fibonacci sequence and unique factorization Coverage of important theorems including the well ordering theorem completeness theorem compactness theorem as well as the theorems of Löwenheim Skolem Burali Forti Hartogs Cantor Schröder Bernstein and König An excellent textbook for students studying the foundations of mathematics and mathematical proofs A First Course in Mathematical Logic and Set Theory is also appropriate for readers preparing for careers in mathematics education or computer science In addition the book is ideal for introductory courses on mathematical logic and or set theory and appropriate for upper undergraduate transition courses with rigorous mathematical reasoning involving algebra number theory or analysis
