Optimizing Methods in Statistics Jagdish S. Rustagi, 2014-05-10 Optimizing Method in Statistics is a compendium of papers dealing with variational methods regression analysis mathematical programming optimum seeking methods stochastic control optimum design of experiments optimum spacings and order statistics One paper reviews three optimization problems encountered in parameter estimation namely 1 iterative procedures

for maximum likelihood estimation based on complete or censored samples of the parameters of various populations 2 optimum spacings of quantiles for linear estimation and 3 optimum choice of order statistics for linear estimation Another paper notes the possibility of posing various adaptive filter algorithms to make the filter learn the system model while the system is operating in real time By reducing the time necessary for process modeling the time required to implement the acceptable system design can also be reduced One paper evaluates the parallel structure between duality relationships for the linear functional version of the generalized Neyman Pearson problem as well as the duality relationships of linear programming as these apply to bounded variable linear programming problems The compendium can prove beneficial to mathematicians students and professor of calculus statistics or advanced mathematics *Mathematical Programming and Game Theory* S.K.
