

Models for Formal Mathematical Logical Systems

- A Formal System uses symbolic logic with predicates and quantifiers to try to capture and express completely and uniquely the totality of statements of a mathematical theory.
- Key issues for such a formal system are
 1. Is the system of logically related propositions sound?
 2. Is the system consistent?
 3. Does the system contain all the propositions of the mathematical theory as theorems.... Is it complete?
- A (set theoretic) model for a formal system is an interpretative correspondence between a part of set theory and the constants, variables, predicates, and other aspects of the formal system. In the model's interpretation every theorem (proven statement) of the system is true.
