Stochastic Systems Roger J.-B. Wets,1976 **Stochastic Programming** Gerd Infanger,2010-11-10 From the Preface The preparation of this book started in 2004 when George B Dantzig and I following a long standing invitation by Fred Hillier to contribute a volume to his International Series in Operations Research and Management Science decided finally to go ahead with editing a volume on stochastic programming The field of stochastic programming also referred to as optimization under uncertainty or planning under uncertainty had advanced significantly in the last two decades both theoretically and in practice George Dantzig and I felt that it would be valuable to showcase some of these advances and to present what one might call the state of the art of the field to a broader audience We invited researchers whom we considered to be leading experts in various specialties of the field including a few representatives of promising developments in the making to write a chapter for the volume Unfortunately to the great loss of all of us George Dantzig passed away on May 13 2005 Encouraged by many colleagues I decided to continue with the book and edit it as a volume dedicated to George Dantzig Management Science published in 2005 a special volume featuring the Ten most Influential Papers of the first 50 Years of Management Science George Dantzig s original 1955 stochastic programming paper Linear Programming under Uncertainty was featured among these ten Hearing about this George Dantzig suggested that his 1955 paper be the first chapter of this book The vision expressed in that paper gives an important scientific and historical perspective to the book Gerd Infanger

Algorithms and Model Formulations in Mathematical Programming Stein W. Wallace,2012-12-06 The NATO Advanced Research Workshop ARW Algorithms and Model Formulations in Mathematical Programming was held at Chr Michelsen Institute in Bergen Norway from June 15 to June 19 1987 The ARW was organized on behalf of the Committee on Algorithms COAL of the Mathematical Programming Society MPS Co directors were Jan Telgen Van Dien Co Organisatie Utrecht The Netherlands and Roger J B Wets The University of California at Davis USA 43 participants from 11 countries attended the ARW The workshop was organized such that each day started with a minute keynote presentation followed by a 45 minute plenary discussion The first part of this book contains the contributions of the five keynote speakers The plenary discussions were taped and the transcripts given to the keynote speakers They have treated the transcripts differently some by working the discussions into their papers others by adding a section which sums up the discussions The plenary discussions were very interesting and stimulating due to active participation of the audience The five keynote speakers were asked to view the topic of the workshop the interaction between algorithms and model formulations from different perspectives On the first day of the workshop Professor Alexander H G Rinnooy Kan Erasmus University Rotterdam The Netherlands put the theme into a larger context by his talk Mathematical programming as an intellectual activity This is an article of importance to any mathematical programmer who is interested in his field s history and present state *Stochastic Systems* Roger J.-B. Seitz,2000 Eugene Dynkin is a rare example of a contemporary mathematician who has achieved results in two quite different areas of research algebra and probability In both areas his ideas constitute an essential part of modern mathematical knowledge and form a basis for further development Although his last work in algebra was published in 1955 his contributions continue to influence current research in algebra and in the physics of elementary particles His work in probability is part of both the historical and the modern development of the topic   **Applied Stochastic Analysis** M. H. A. Davis,Robert James Elliott,1991 A collection of 22 articles based on papers presented at a workshop held at Imperial College London April 1989 They concern applications of stochastic analysis the theory of stochastic integration martingales and Markov processes to a variety of applied problems centered around optimization of dynamical systems under uncertainty Topics covered include characterization and approximation for stochastic system models problems in stochastic control theory and various facets of nonlinear filtering theory and system identification Annotation copyrighted by Book News Inc Portland OR   Stochastic systems: modeling, identification and optimization Roger J.-B. Ramirez-Mendoza,Ruben Morales-Menendez,2023-03-31 A key challenge in science and engineering is to provide a quantitative description of the systems under investigation leveraging the noisy data collected Such a description may be a complete mathematical model or a mechanism to return controllers corresponding to new unseen inputs Recent advances in the theories are described in detail along with their applications in engineering The book aims to develop model free system analysis and control strategies i e data driven control from theoretical analysis and engineering applications based only on measured data The study aims to develop system identification and combination in advanced control theory i e data driven control strategy as system and controller are generated from measured data directly The book reviews the development of system identification and its combination in advanced control theory i e data driven control strategy as they all depend on measured data Firstly data driven identification is developed for the closed loop nonlinear system and model validation i e obtaining model descriptions from measured data Secondly the data driven idea is combined with some control strategies to be considered data driven control strategies such as data driven model predictive control data driven iterative tuning control and data driven subspace predictive control Thirdly data driven identification and data driven control strategies are applied to interested engineering In this context the book provides algorithms to perform state estimation of dynamical systems from noisy data and some convex optimization algorithms through identification and control problems   **Technical Abstract**
