Restoration Methods Selection for Wood Components of Chinese Ancient Architectures Based on TODIM with Single-Valued Neutrosophic Sets Xiaolu Long, Lizhi Liu, Can Xiao, Pengfei Cheng, Chengxun Fu, The selection of restoration methods for ancient architectures is of great significance for the protection of human cultural heritage This paper proposes a novel restoration methods selection approach for wood components of Chinese ancient architectures in which a multicriteria group decision making MCGDM method with decision making information in the form of single-valued neutrosophic sets SNNSs Firstly it establishes an index system by comprehensively considering subjective and objective criteria In addition the best worst method BWM and the entropy weight method are combined to produce index weights Furthermore the TODIM method is utilized by the single-valued neutrosophic sets to prioritize restoration methods Finally a specific case of wood component restoration is conducted to demonstrate the practicability of the proposed model the robustness and effectiveness of the proposed method is verified by sensitivity analysis and comparison analysis

Multicriteria Decision Making Tomas Gal, Theodor Stewart, Thomas Hanne, 2013-03-09 At a practical level mathematical programming

under multiple objectives has emerged as a powerful tool to assist in the process of searching for decisions which best satisfy a multitude of conflicting objectives and there are a number of distinct methodologies for multicriteria decision making problems that exist. These methodologies can be categorized in a variety of ways such as form of model e.g. linear non linear stochastic characteristics of the decision space e.g. finite or infinite or solution process e.g. prior specification of preferences or interactive. Scientists from a variety of disciplines mathematics economics and psychology have contributed to the development of the field of Multicriteria Decision Making MCDM or Multicriteria Decision Analysis MCDA Multiattribute Decision Making MADM Multiobjective Decision Making MODM etc over the past 30 years helping to establish MCDM as an important part of management science. MCDM has become a central component of studies in management science economics and industrial engineering in many universities worldwide. *Multicriteria Decision Making Advances in MCDM Models Algorithms Theory and Applications* aims to bring together state of the art reviews and the most recent advances by leading experts on the fundamental theories methodologies and applications of MCDM. This is aimed at graduate students and researchers in mathematics economics management and engineering as well as at practicing management scientists who wish to better understand the principles of this new and fast developing field. **Mathematical Reviews**, 1998

Valuation of Renewable Energy Investments Christian Hürlimann, 2019-08-08 In this book Christian Hürlimann examines valuation methods and their application in the context of managerial finance within renewable energy investments. Based on a mixed methods approach current practices in performing valuation are empirically analyzed among German and Swiss investors. The developed concepts provide practitioners tools to define equity value drivers consider risk treatments and value investments along the two dimensions of value creation and value protection. **Risk Management** Walter V. "Bud" Haslett, Jr., 2010-10-05 Key readings in risk management from CFA Institute the preeminent organization representing financial analysts. Risk management may have been the single most important topic in finance over the past two decades. To appreciate its complexity one must understand the art as well as the science behind it. *Risk Management Foundations for a Changing Financial World* provides investment professionals with a solid framework for understanding the theory philosophy and development of the practice of risk management by Outlining the evolution of risk management and how the discipline has adapted to address the future of managing risk. Covering the full range of risk management issues including firm portfolio and credit risk management Examining the various aspects of measuring risk and the practical aspects of managing risk Including key writings from leading risk management practitioners and academics such as Andrew Lo Robert Merton John Bogle and Richard Bookstaber For financial analysts money managers and others in the finance industry this book offers an in depth understanding of the critical topics and issues in risk management that are most important to today's investment professionals. *Nonlinear Dynamics in Economics and Social Sciences* Franco Gori, Lucio Geronazzo, Marcello

Galeotti,2012-12-06 This volume constitutes the Proceedings of the Nonlinear Dynamics in Economics and Social Sciences Meeting held at the Certosa di Pontignano Siena on May 27 30 1991 The Meeting was organized by the National Group Modelli Nonlineari in Economia e Dinamiche Complesse of the Italian Ministry of University and Scientific Research M U R S T The aim of the Conference which followed a previous analogous initiative taking place in the very same Certosa on January 1988 was the one of offering a come together opportunity to economists interested in a new mathematical approach to the modelling of economical processes through the use of more advanced analytical techniques and mathematicians acting in the field of global dynamical systems theory and applications A basic underlying idea drove the organizers the necessity of focusing on the use that recent methods and results as those commonly referred to the overpopularized label of Chaotic Dynamics did find in the social sciences domain and thus to check their actual relevance in the research program of modelling economic phenomena in order to individuate and stress promising perspectives as well as to curb excessive hopes and criticize not infrequent cases where research reduces to mechanical ad hoc applications of a la mode techniques In a word we felt the need of looking about the state of the arts in non linear systems theory applications to economics and social processes hence the title of the workshop and the volume *Deterministic and Stochastic Optimal Control* Wendell H.

Fleming,Raymond W. Rishel,2012-12-06 This book may be regarded as consisting of two parts In Chapters I IV we present what we regard as essential topics in an introduction to deterministic optimal control theory This material has been used by the authors for one semester graduate level courses at Brown University and the University of Kentucky The simplest problem in calculus of variations is taken as the point of departure in Chapter I Chapters II III and IV deal with necessary conditions for an optimum existence and regularity theorems for optimal controls and the method of dynamic programming The beginning reader may find it useful first to learn the main results corollaries and examples These tend to be found in the earlier parts of each chapter We have deliberately postponed some difficult technical proofs to later parts of these chapters In the second part of the book we give an introduction to stochastic optimal control for Markov diffusion processes Our treatment follows the dynamic programming method and depends on the intimate relationship between second order partial differential equations of parabolic type and stochastic differential equations This relationship is reviewed in Chapter V which may be read independently of Chapters I IV Chapter VI is based to a considerable extent on the authors work in stochastic control since 1961 It also includes two other topics important for applications namely the solution to the stochastic linear regulator and the separation principle **Neutrosophic Sets and Systems, vol. 17/2017** Yingchang Ma,S.
