

## Problem Solving

### Tips to make Problem Solving EASY!

1. Read the question carefully and highlight/underline the **actual question** asked, e.g. *How many marbles do they have all together?*
2. Underline/highlight the **key words that refer to operations**. Remember that any problem solving question requires an operation or more. One operation or more than one operation should be by using the key words, e.g. more, less, double, half, of, shared equally, added, subtracted, multiplied, divided.
3. Sometimes no key words are given, but you can **determine the operation** by carefully reading the question, e.g. If it costs R35 for one ball, how much will you pay if you bought 5 balls? Multiply –  $R35 \times 5 = R175$
4. Decide if this is a **one-step problem** or if **more than one operation** is required to solve the problem.  
 Example: Emma saves R145,00 a month and Ben saves R136,00 a month. How much money will they save in 3 months?  
 Two operations: Addition –  $R145 + R136 = R281$   
 Multiply –  $R281 \times 3 = R843$
5. Formulate your **Open Number Sentence**. Some problems may require more than one number sentence.
6. **Calculate the answers**, working accurately and showing all your calculations!
7. **Always answer in a full sentence**. Be sure that you are answering the question asked! Remember that if you copy the question and don't answer exactly what has been asked, in exactly the same words, you will lose marks.

### Example 1:

Charlie buys a toaster for R15,50, a Coke for R8,50 and a packet of crisps for R6,30 at the tuck shop every day from Monday to Friday. How much money will he spend at the tuck shop in one week?

1. Read the question carefully and underline the question to be answered:  
How much money will he spend at the tuck shop in one week?
2. Decide which operations should be used to solve the problem.  
 Addition – **a Coke and a packet of crisps** – addition  
 $R8,50 + R6,30 = R14,80$   
 Multiplication – **Monday to Friday** – multiply by 5  
 $R14,80 \times 5 = R74,00$
3. Write an **open number sentence** or more than one sentence if necessary:  
 $R15,50 + R8,50 + R6,30 = \blacktriangle$        $\blacktriangle \times 5 = \blacktriangle$

McLeod, Verna M.

Adams, 2012-12-06 Research on cognitive aspects of mathematical problem solving has made great progress in recent years but the relationship of affective factors to problem solving performance has been a neglected research area The purpose of *Affect and Mathematical Problem Solving A New Perspective* is to show how the theories and methods of cognitive science can be extended to include the role of affect in mathematical problem solving The book presents Mandler's theory of emotion

and explores its implications for the learning and teaching of mathematical problem solving Also leading researchers from mathematics education and psychology report how they have integrated affect into their own cognitive research The studies focus on metacognitive processes aesthetic influences on expert problem solvers teacher decision making technology and teaching problem solving and beliefs about mathematics The results suggest how emotional factors like anxiety frustration joy and satisfaction can help or hinder performance in problem solving Resources in Education ,2000 *Rigorous Mathematical Thinking* James T. Kinard,Alex Kozulin,2008-06-02 This book demonstrates how rigorous mathematical thinking can be fostered through the development of students cognitive tools and operations This approach seems to be particularly effective with socially disadvantaged and culturally different students The authors argue that children s cognitive functions cannot be viewed as following a natural maturational path they should be actively constructed during the educational process The Rigorous Mathematical Thinking RMT model is based on two major theoretical approaches Vygotsky s theory of psychological tools and Feuerstein s concept of mediated learning experience The book starts with general cognitive tools that are essential for all types of problem solving and then moves to mathematically specific cognitive tools and methods for utilizing these tools for mathematical conceptual formation The application of the RMT model in various urban classrooms demonstrates how mathematics education standards can be reached even by the students with a history of educational failure who were considered hopeless underachievers Research in Education ,1971 **Problem-Solver's Math Journal Guide** Teacher Created Materials Staff,2004-12-01 Use the Teacher s Guide with your students Problem Solver s Math Journal Teacher s Guides include the answer key **Math Wise! Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the

second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity

Towards Equity in Mathematics Education Helen Forgasz, Ferdinand Rivera, 2012-03-21 This volume gathers together twenty major chapters that tackle a variety of issues associated with equity in mathematics education along the dimensions of gender culture curriculum diversity and matters of

a biological nature The pursuit of equity in mathematics education is an important concern in the history of the present Since there is no doubt about the significant role of mathematics in almost every aspect of life it means that all individuals regardless of sex in any age range and in whatever context need to be provided with an opportunity to become mathematically able The publication of this Springer volume on equity in mathematics education is situated at a time when there is strong and sustained research evidence indicating the persistence of an equity gap in mathematics which has now enabled the mathematics education community to engage in a discourse of access for all The research studies that are reported and discussed in the volume have been drawn from an international group of distinguished scholars whose impressive forward looking and thought provoking perspectives on relevant issues incite broaden and expand complicated conversations on how we might effectively achieve equity in mathematics education at the local institutional and systemic levels Further the up to date research knowledge in the field that is reflected in this volume provides conceptual and practical outlines for mechanisms of change including models examples and usable theories that can inform the development of powerful equitable practices and the mobilization of meaningful equity interventions in different contexts of mathematics education
