Network Recovery Jean-Philippe Vasseur,Mario Pickavet,Piet Demeester,2004-08-19 Network Recovery is the first book to provide detailed information on protecting and restoring communication networks and it sets a sky high standard for any that may follow Inside you ll learn specific techniques that work at each layer of the networking hierarchy including optical SONET SDH IP and MPLS as well as multi layer escalation strategies that offer the highest level of protection The authors begin with an incisive introduction to the issues that define the field of network protection and restoration and as the book progresses they explain everything you need to know about the relevant protocols providing theoretical analyses wherever appropriate If you work for a network dependent organization large or small you ll want to keep Network Recovery within reach at all times Shows you how to implement protection and recovery techniques that will save your organization time and money Documents techniques for the optical SONET SDH IP and MPLS layers as well as multi layer escalation strategies Shows you how to evaluate these techniques in relation to one another so you can develop an optimal network recovery design Provides industry examples and simulation results Delves into the inner workings of relevant protocols and offers theoretical analyses wherever this information contributes to your practical knowledge

Content Networking Markus Hofmann,Leland R. Beaumont,2005-02-15 As the Internet has grown so have the challenges associated with delivering static streaming and dynamic content to end users This book is unique in

that it addresses the topic of content networking exclusively and comprehensively tracing the evolution from traditional web caching to today's open and vastly more flexible architecture. With this evolutionary approach, the authors emphasize the field's most persistent concepts, principles, and mechanisms, the core information that will help you understand why and how content delivery works today and apply that knowledge in the future. Focuses on the principles that will give you a deep and timely understanding of content networking. Offers dozens of protocol-specific examples showing how real-life Content Networks are currently designed and implemented. Provides extensive consideration of Content Services including both the Internet Content Adaptation Protocol (ICAP) and Open Pluggable Edge Services (OPES). Examines methods for supporting time-constrained media such as streaming audio and video and real-time media such as instant messages. Combines the vision and rigor of a prominent researcher with the practical experience of a seasoned development engineer to provide a unique combination of theoretical depth and practical application.

Wireless Sensor Networks Feng Zhao, Leonidas Guibas, 2004-07-21 Information processing in sensor networks is a rapidly emerging area of computer science and electrical engineering research. Because of advances in micro sensors, wireless networking, and embedded processing, ad hoc networks of sensors are becoming increasingly available for commercial, military, and homeland security applications. Examples include monitoring, e.g., traffic, habitat, security, industrial sensing and diagnostics, e.g., factory appliances, infrastructures, i.e., power grid, water distribution, waste disposal, and battle awareness, e.g., multi-target tracking. This book introduces practitioners to the fundamental issues and technology constraints concerning various aspects of sensor networks such as information organization, querying, routing, and self-organization, using concrete examples and does so by using concrete examples from current research and implementation efforts. Written for practitioners, researchers, and students and relevant to all application areas including environmental monitoring, industrial sensing and diagnostics, automotive and transportation security, and surveillance, military and battlefield uses, and large-scale infrastructural maintenance. Skillfully integrates the many disciplines at work in wireless sensor network design: signal processing and estimation, communication theory and protocols, distributed algorithms and databases, probabilistic reasoning, energy-aware computing, design methodologies, evaluation metrics, and more. Demonstrates how querying, data routing, and network self-organization can support high-level information processing tasks.

Routing, Flow, and Capacity Design in Communication and Computer Networks Michal Pioro, Deep Medhi, 2004-07-21 In network design, the gap between theory and practice is woefully broad. This book narrows it comprehensively and critically examining current network design models and methods. You will learn where mathematical modeling and algorithmic optimization have been underutilized. At the opposite extreme, you will learn where they tend to fail to contribute to the twin goals of network efficiency and cost savings. Most of all, you will learn precisely how to tailor theoretical models to make them as useful as possible in practice. Throughout, the authors focus on the traffic demands encountered in the real world of network design. Their generic approach, however, allows problem formulations and solutions

to be applied across the board to virtually any type of backbone communication or computer network For beginners this book is an excellent introduction For seasoned professionals it provides immediate solutions and a strong foundation for further advances in the use of mathematical modeling for network design Written by leading researchers with a combined 40 years of industrial and academic network design experience Considers the development of design models for different technologies including TCP IP IDN MPLS ATM SONET SDH and WDM Discusses recent topics such as shortest path routing and fair bandwidth assignment in IP MPLS networks Addresses proper multi layer modeling across network layers using different technologies for example IP over ATM over SONET IP over WDM and IDN over SONET Covers restoration oriented design methods that allow recovery from failures of large capacity transport links and transit nodes Presents at the end of each chapter exercises useful to both students and practitioners
